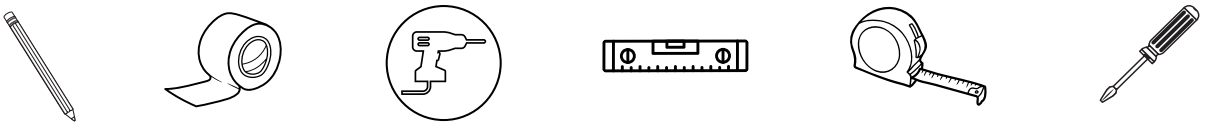
Hanging Guide for Factory Fitted Hangers

- Different wall materials require different types of fixings. As wall materials vary, the wall plugs and screws are not included.
- Before drilling into walls always check that there are no hidden pipes or wires etc. Please ensure that the wall plugs and screws used are suitable for supporting your mirror. Always consult a qualified trades person if unsure.
- **ATTENTION: Under no circumstances should mirrors be hung using any form of cord, wire or string. This would be extremely unsafe!**
- If there are two strap hangers fitted to the mirror then two wall plugs and wall screws will be required to hang the mirror to the wall.

Strap hanger

Tools Required:

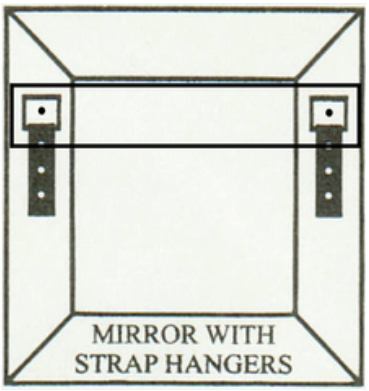


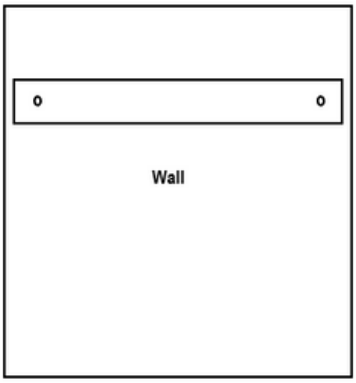
Step 1:

- Using a piece of masking tape as a template, mark the distance between the middle of each strap hanger. Once marked carefully remove the masking tape.

Step 2:

- Position the masking tape on the wall to the desired location using a spirit level or measuring tape to ensure alignment. Then drill through the markings on the masking tape and insert wall plugs and screws.





Care and Maintenance

- Carefully wipe the frame clean with a soft non-abrasive dry cloth. Wipe mirror glass clean with a soft, non-abrasive cloth dampened in water or window cleaner then wipe with a dry cloth. Avoid any harsh chemicals coming into contact with the edge of mirror glass only if the edges are on show.
