Product Features of Vacuum-Compressed Sofa

It foam density graisity about 7day for inside
the bean bag chair to fully breathe and regain their elasticity.

1、Freshly unboxed items may show wrinkles, insufficient support or sagging due to vacuum compression. This happens because the inner sponge requires time to fully recover its density.

2、At this point, gently pat the sofa and place it in a well-ventilated area to speed up its recovery.

3、The product will regain its support and elasticity within 3-7 days for a comfortable seating experience.
