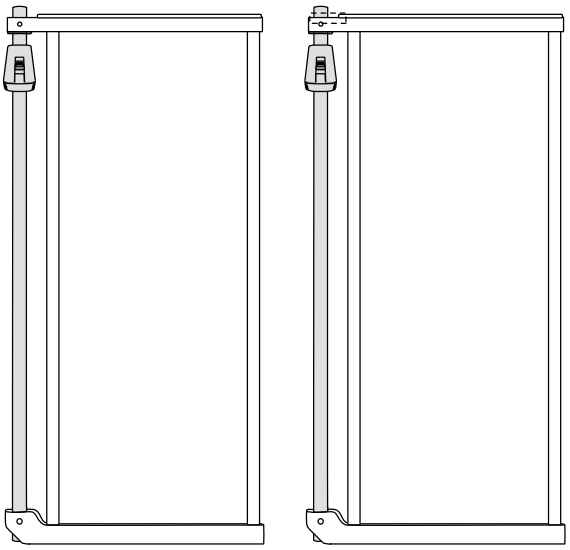
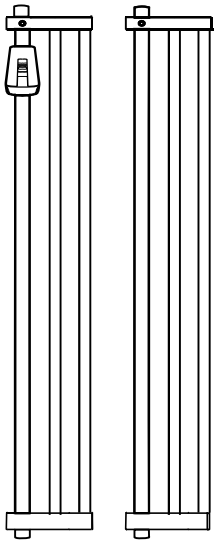
Before starting assembly, confirm that you have all the parts listed in the Parts List.

① Upper Frame *2

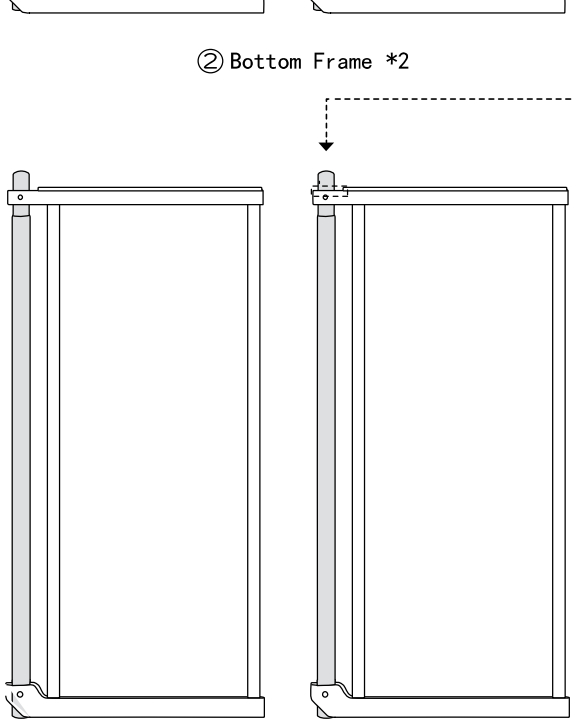


※The upper frame (top) has spacer.

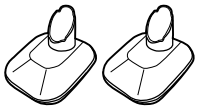
③10cm Extention *1



② Bottom Frame *2

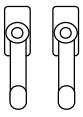


④ Anti-slip Socket *2



Screw box:

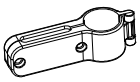
⑤ Door lock rod*3



⑥ Door lock fixing Part*3

⑦ Adjuster*2

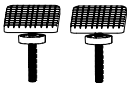
⑧ Locking Clip*2



⑨ Screw*4

⑩ Nut*4

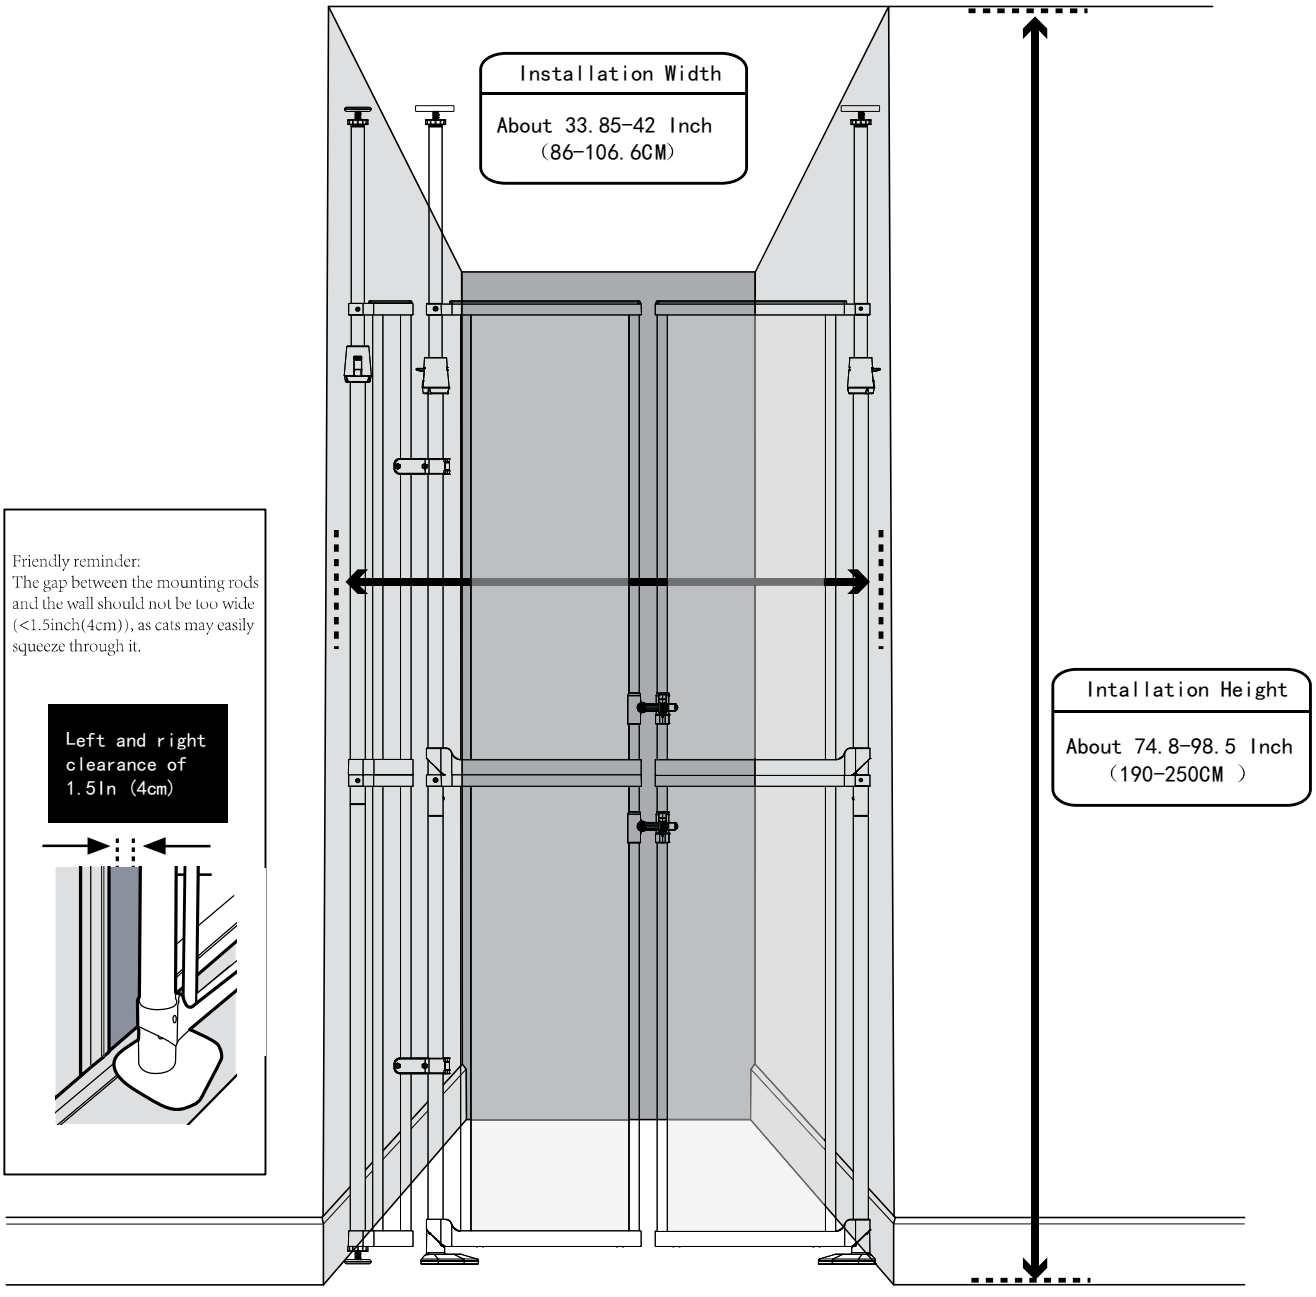
⑪ Adjuster *2



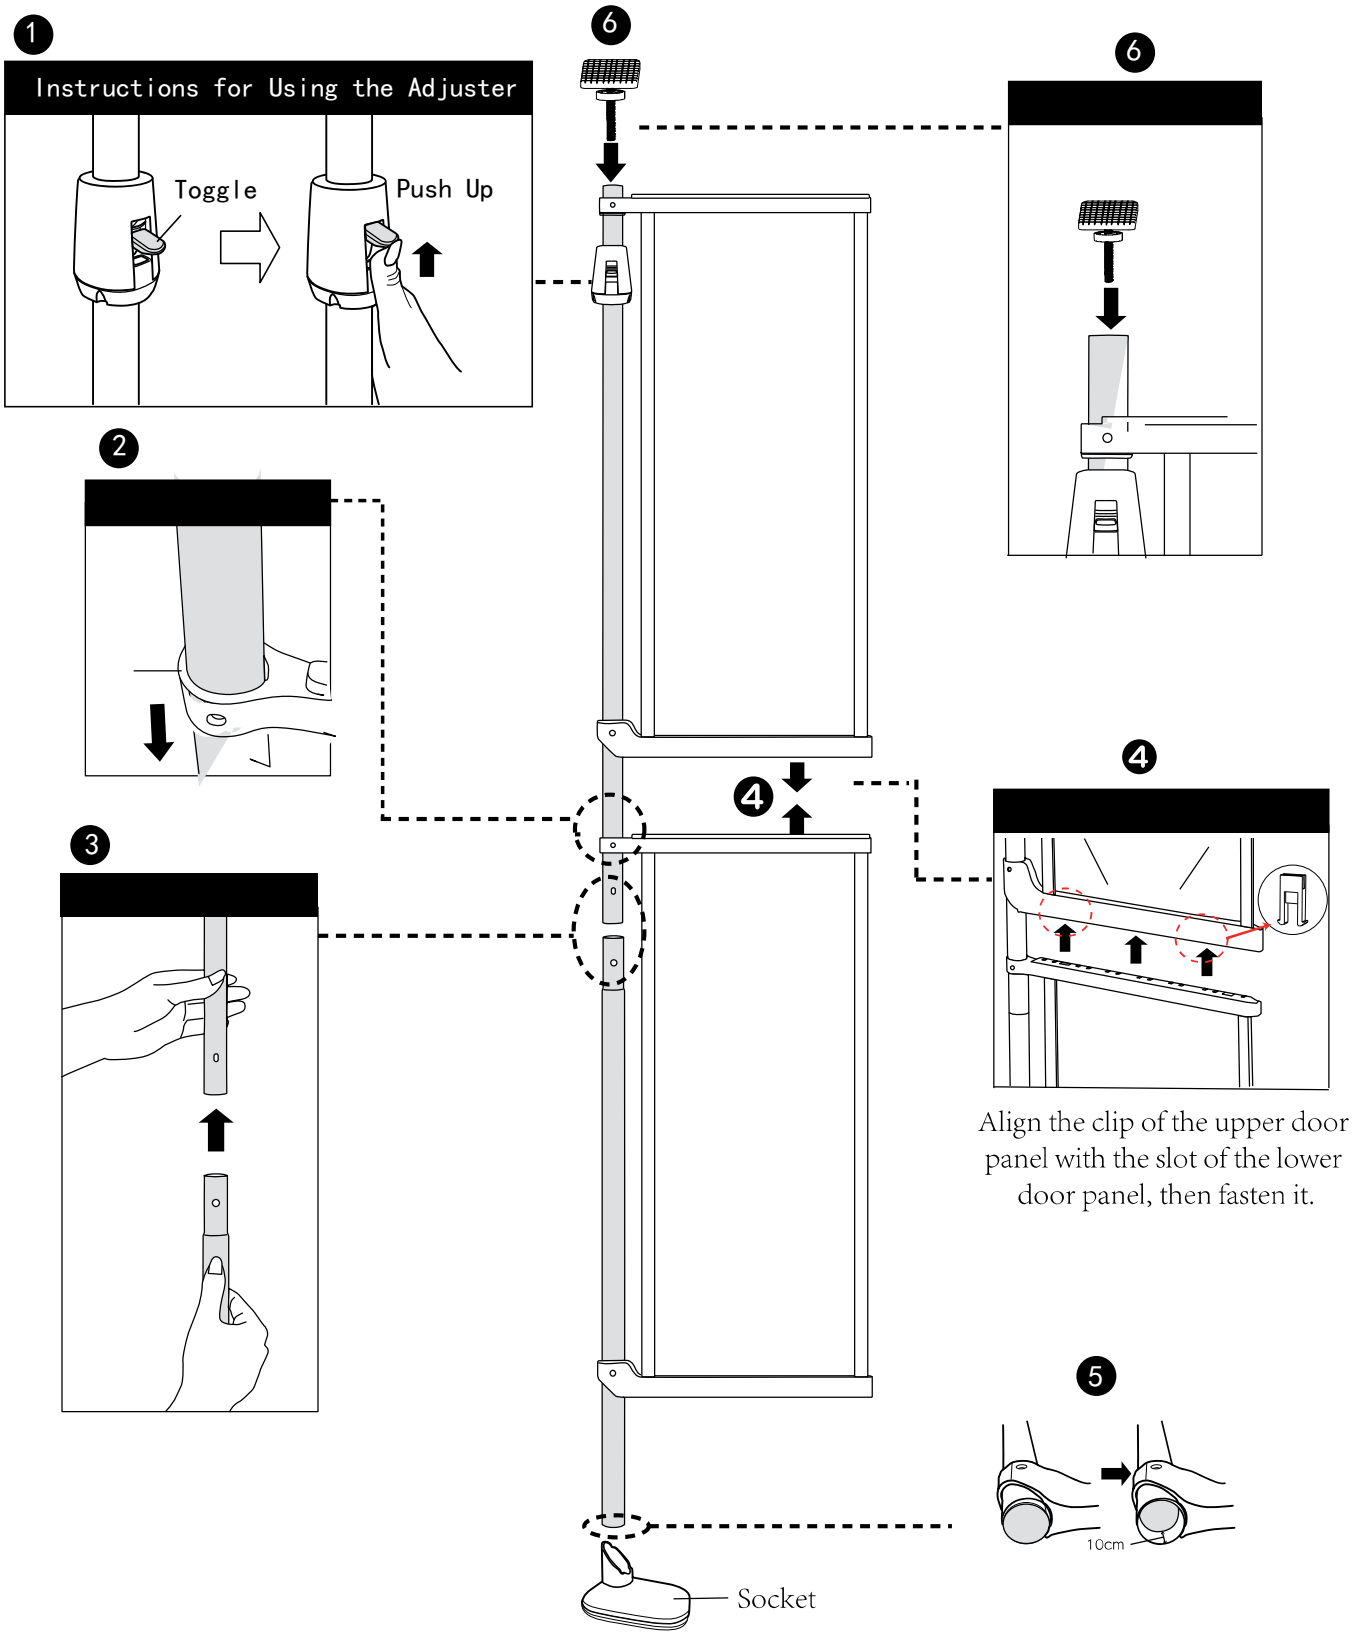
Installation Location

⚠ Caution

1. Before you begin the installation, please thoroughly inspect the designated "Installable Locations" and ensure that you proceed with the installation in a correct and safe manner.
2. Please note that the possibility of installation may be affected by the shape of the baseboards on the wall or the edges around the ceiling.
3. Prior to assembly, kindly measure the width and height of the installation area and proceed accordingly.



1 Step 1: Connecting the Frame and Rod

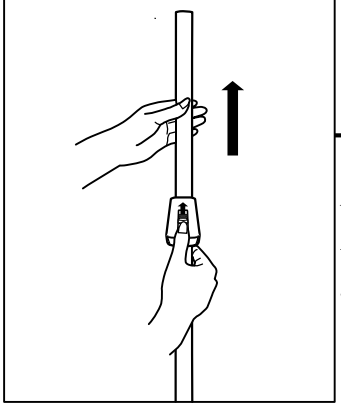


Align the clip of the upper door panel with the slot of the lower door panel, then fasten it.

Method for installing extension parts

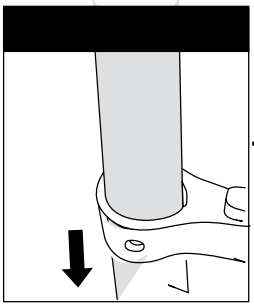
1

Extend the top tube

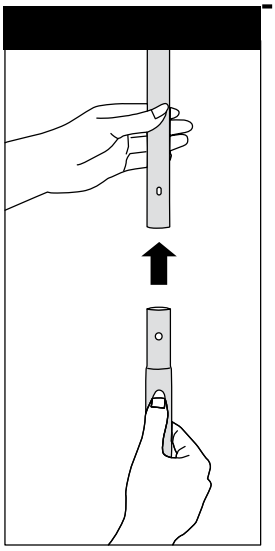


Press and hold the button upwards, then pull the upper straight tube up by 10 cm.

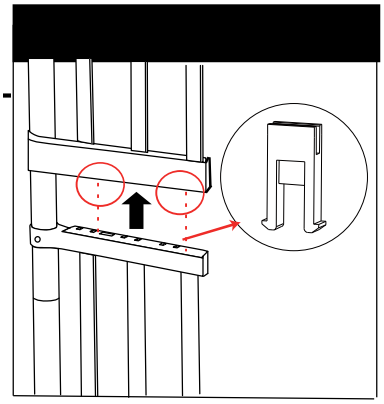
2



3

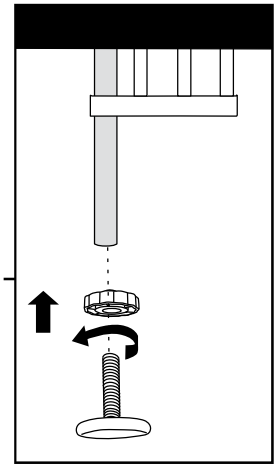


4

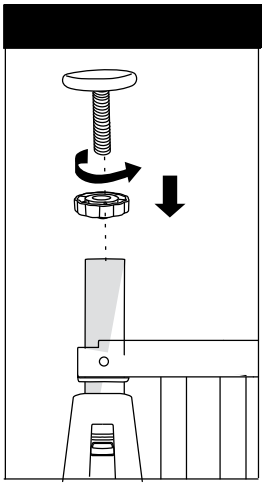


Align the clip of the upper door panel with the slot of the lower door panel, then fasten it.

5



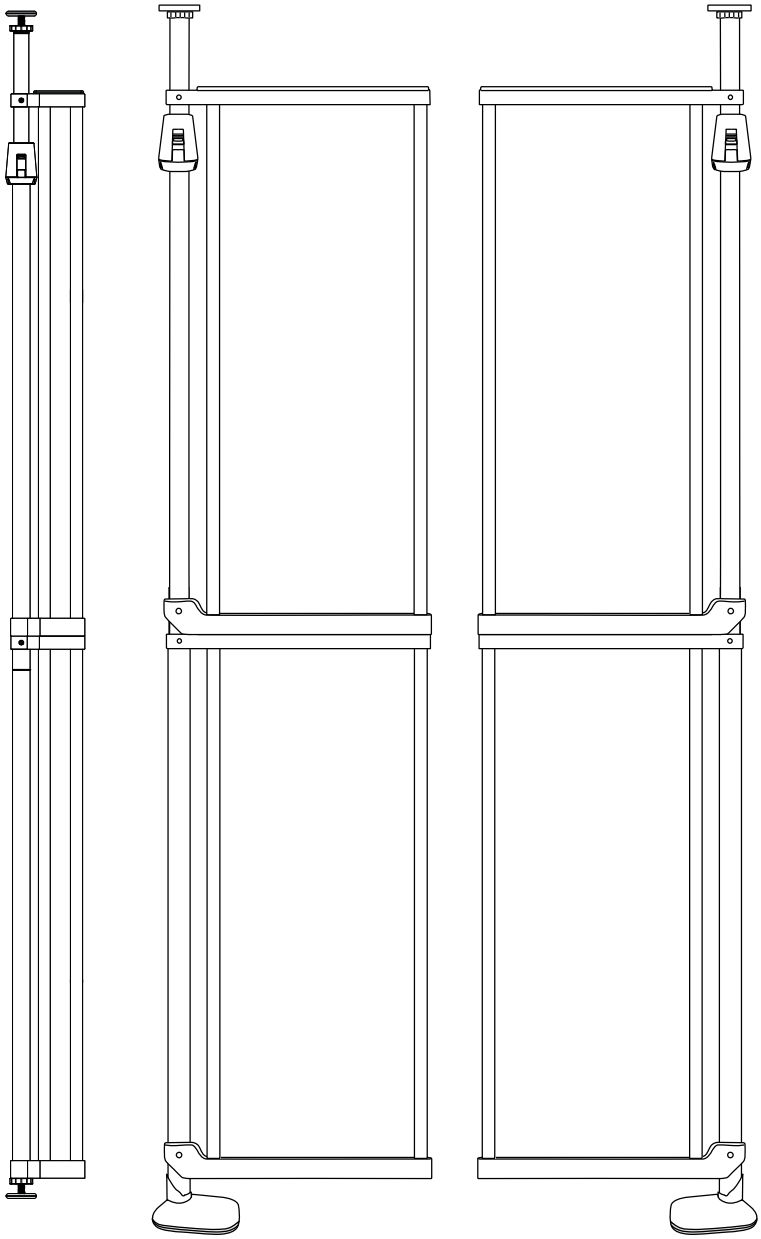
6



Assembly method (method of mounting rods and frames)

※Assemble the right frame in the same way as the left frame

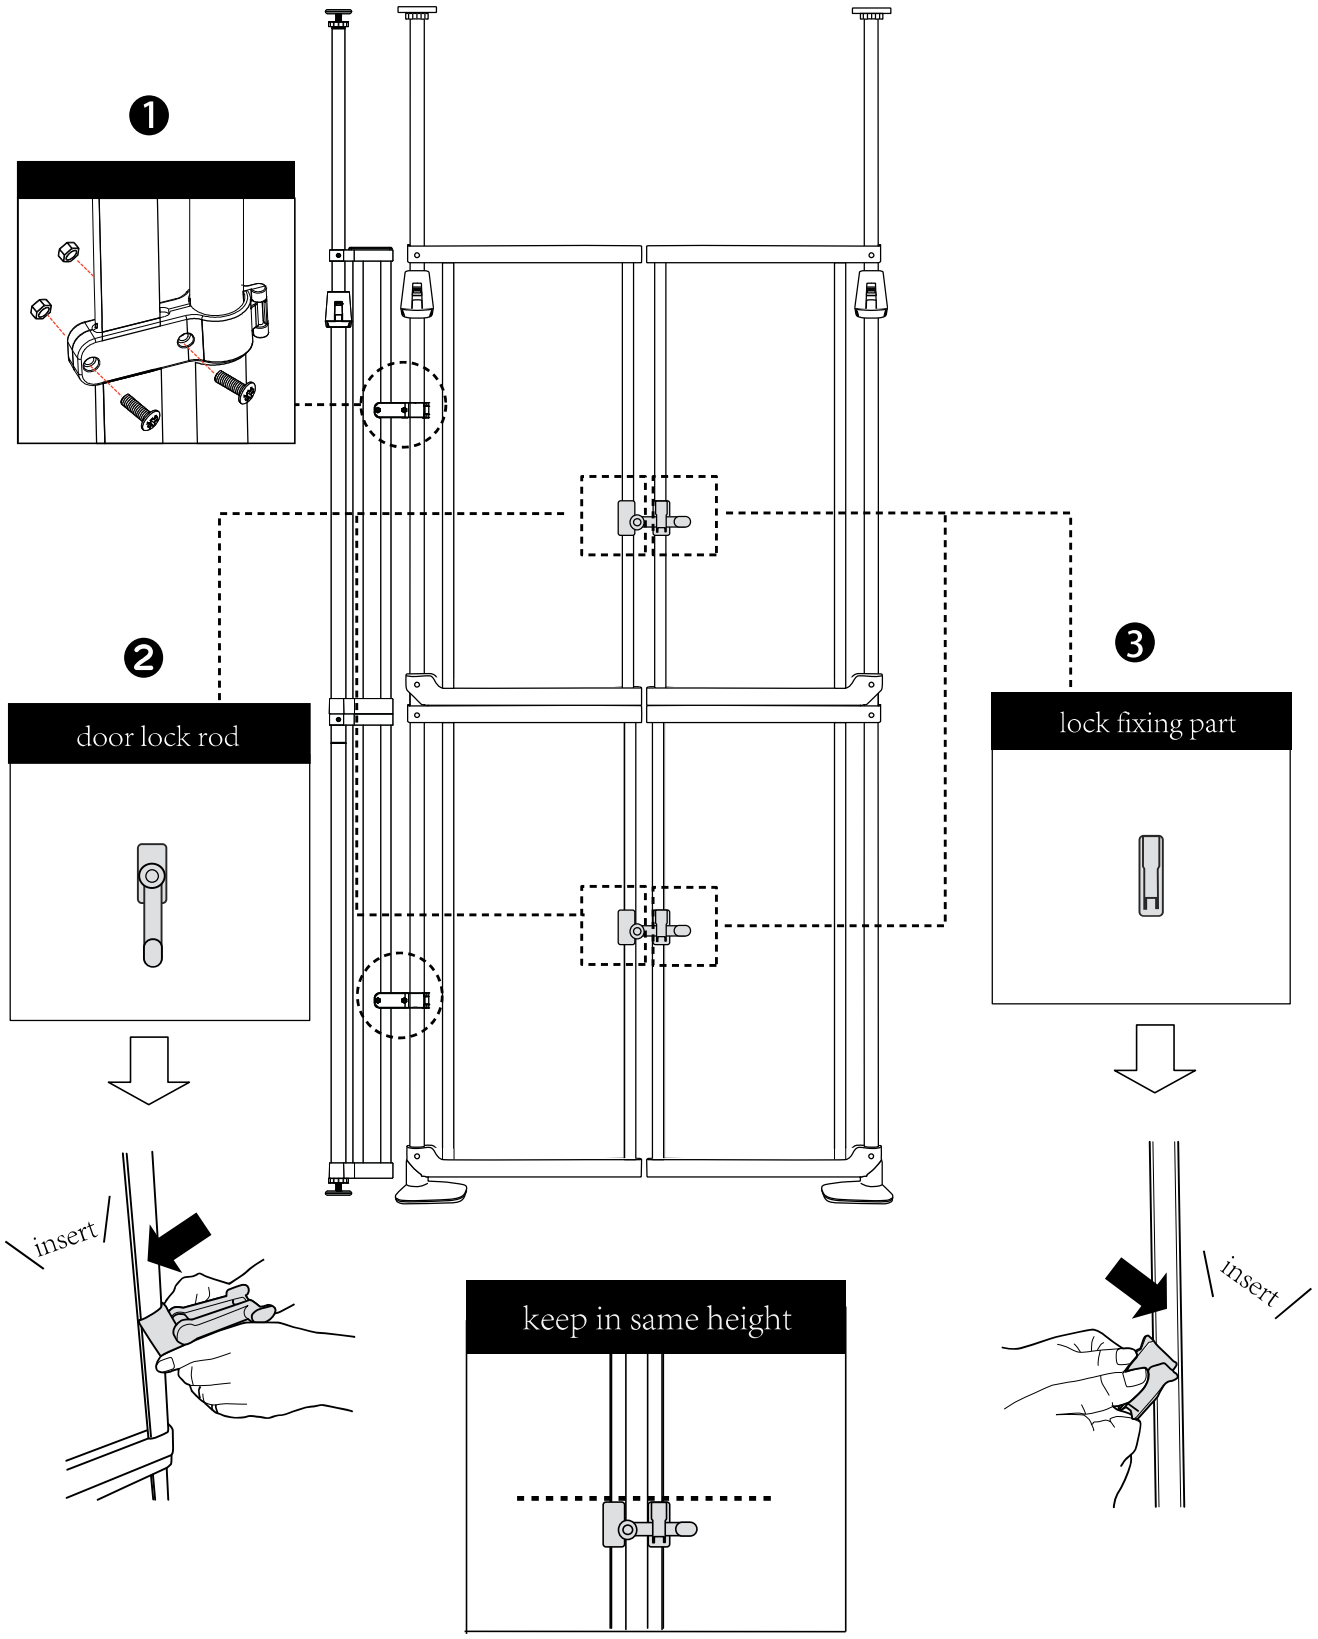
Left Frame Assembly Completed



2 Install the Gate Lock and Locking Clip

Tips **Enhanced Security Option:**

An extra third latch is provided. For larger or more determined pets, we recommend installing this additional latch to prevent any accidental escapes.

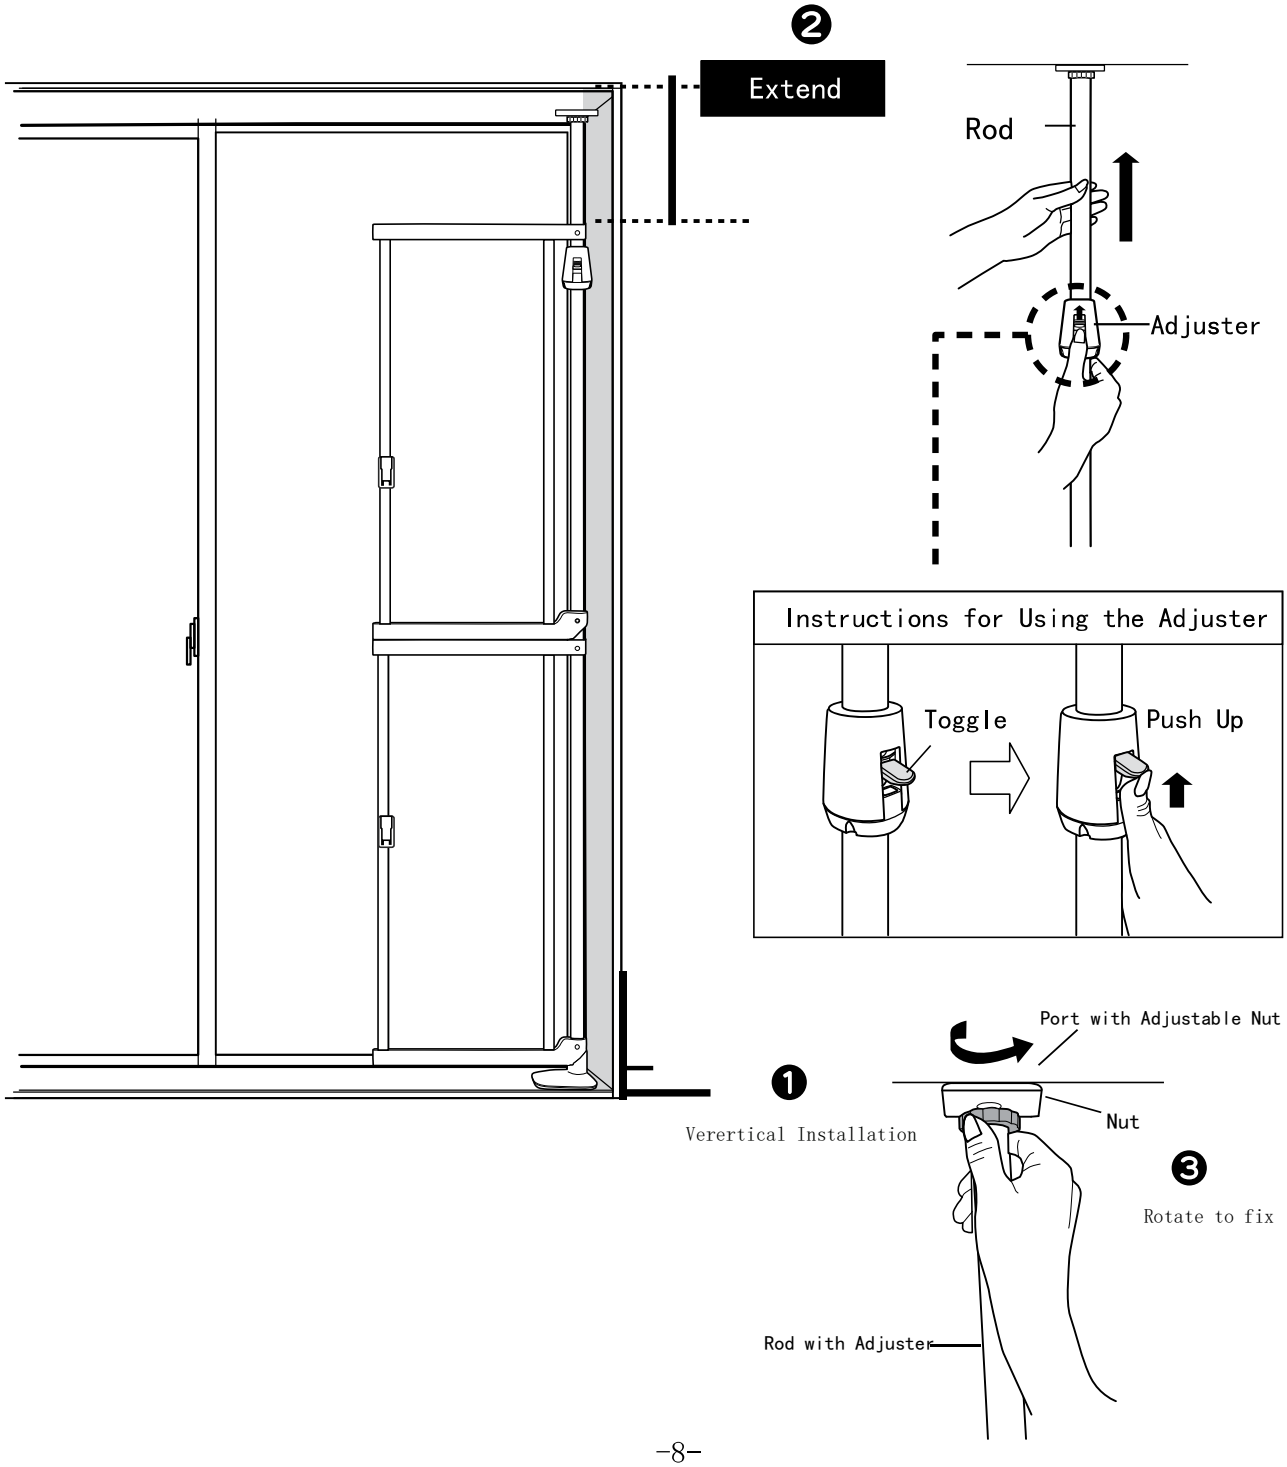


Installing the door on one side

❶ Position the Door: After determining the installation position, hold the door in place. Ensure the pressure rod is vertical.

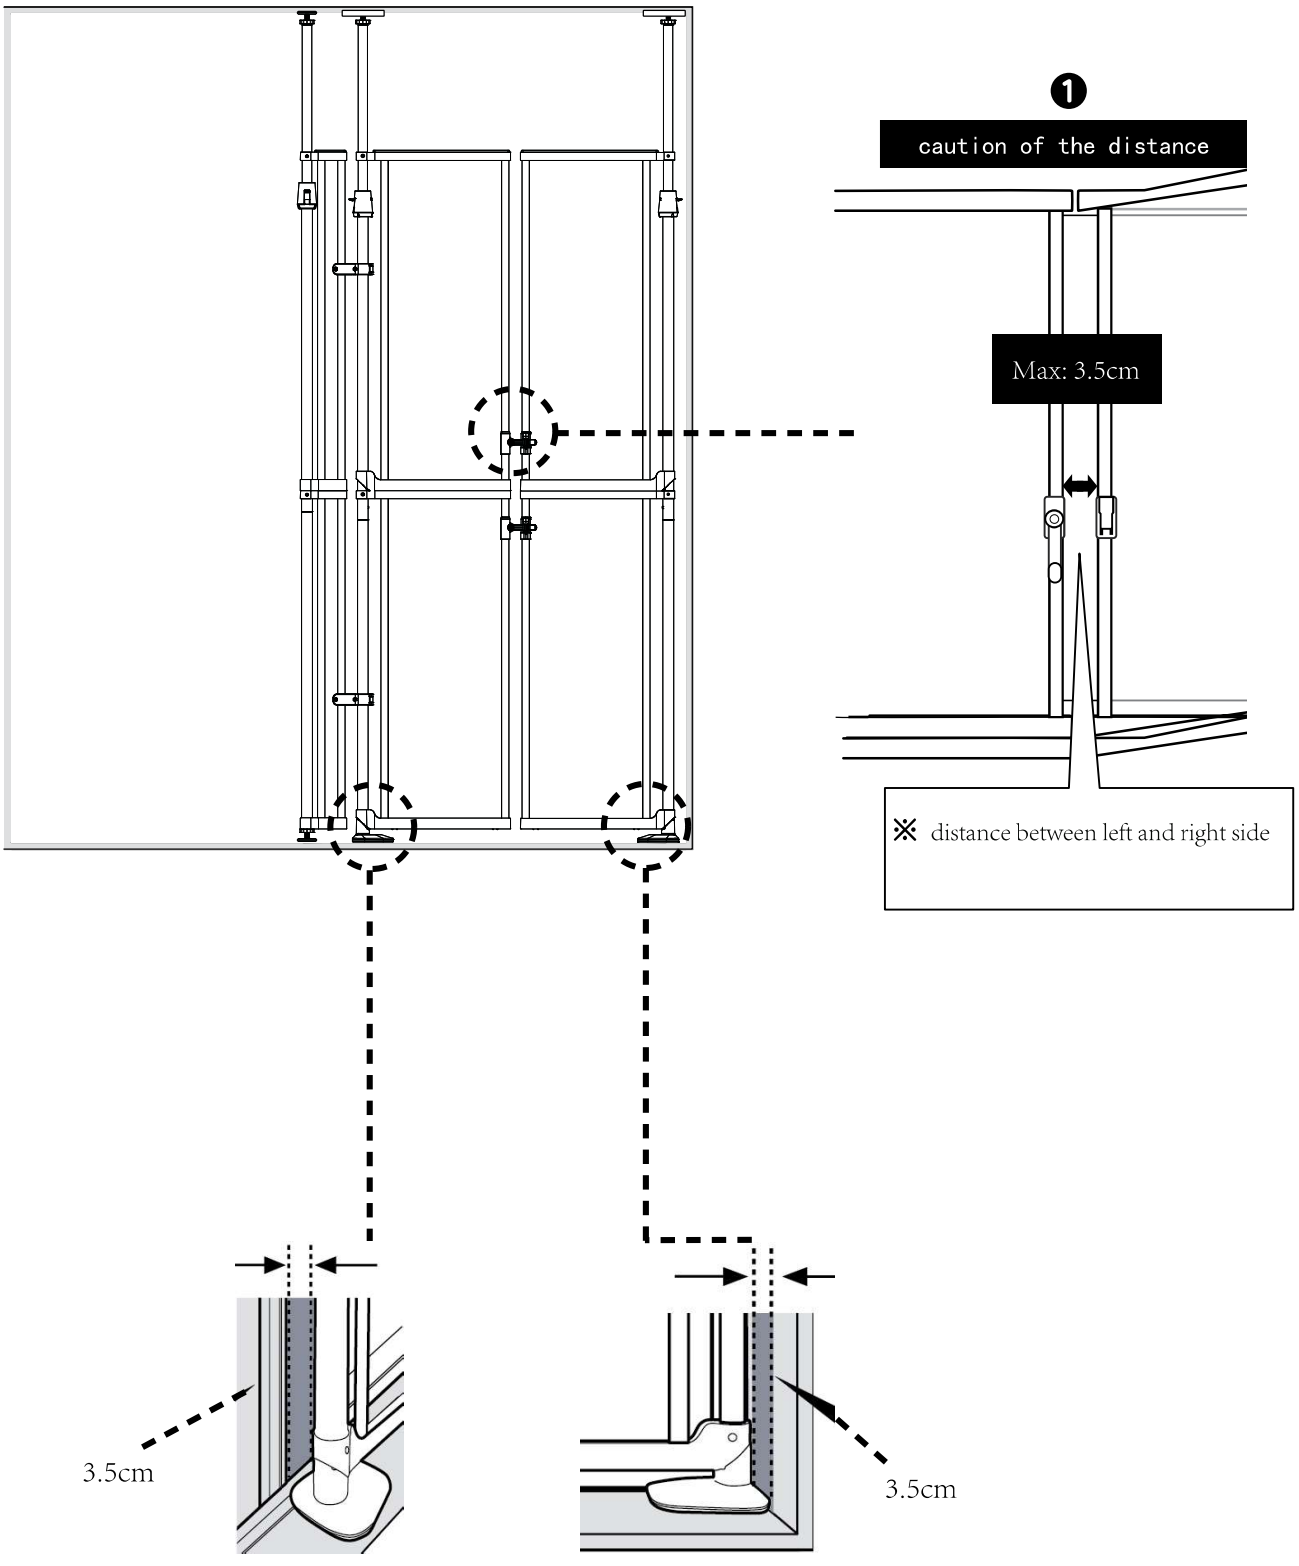
❷ Extend the Top Bar: While pushing up the adjusting rod, extend the top bar until it firmly contacts the installation surface.

❸ Secure the Gate: Once the gate is correctly positioned, turn the adjusting nut counterclockwise to tighten and lock the gate securely in place.

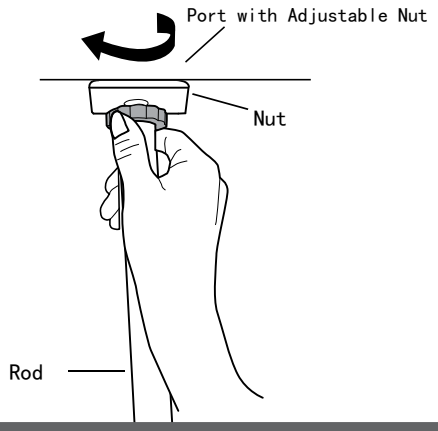


Install the other cover in the same way

Check Lock Alignment: Before tightening, ensure the distance between the door frames allows the two halves of the lock to align and snap together properly.
Adjust the position of the pressure rod to eliminate any large gaps on either side, preventing your pet from attempting to slip through.



How to Remove the Door



1 From below, rotate the nut with the adjustable nut clockwise, then lower the adjusting rod and remove it from the installation position.

2 Disassemble the framd and rods in the reverse order of assembly. (refer to pages 6-7 for assembly instructions.)

3 If you want to disassemble the upper and lower frame components of the gate, please shake the two frame pieces in opposite directions at the link. This will make it easier to dismantle the gate.

⚠ Note

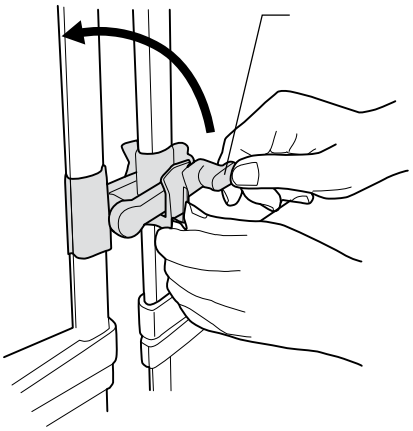
Please follow the steps to remove it. Doing otherwise may damage the walls and ceiling.

How to Open and Close the Door

Open

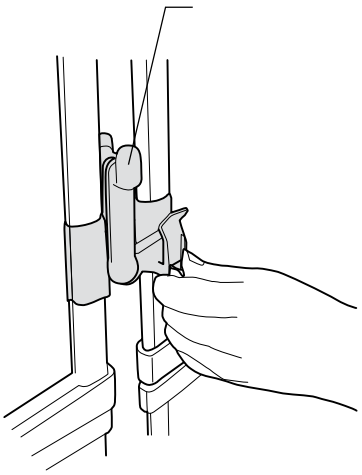
❶ **Unlock**

Slide the locking switch to unlock.



❷ **Raise The Locking Lever**

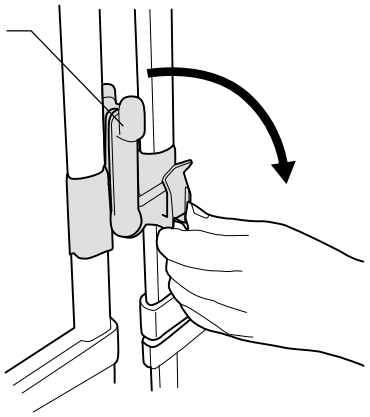
Lift the door lock rod to open the door.



Close

❶ **Lower the Locking Rod**

Lower the door lock rod and hook it onto the door lock fixing part.



❷ **Lock**

Slide the locking switch to lock.
