

Installation Instructions

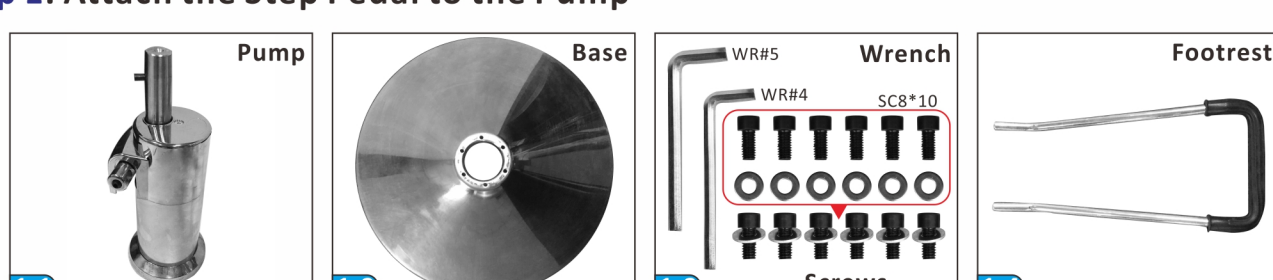

1. Parts Included

2. Installation Instruction

Please note, the top seat could be heavy, 2 people are recommended for the installation

Step 1. Attach the Step Pedal to the Pump

1. Parts you will need for this step.

2. Install the Base: 2-1. Turn the Pump upside down, insert the Base; 2-2. Secure the Base onto the Pump using the SC8*10 screws and the wrench (**Make sure the screws are tightened to prevent chairs from rocking after installation.**); 2-3. Turn the Pump to the upright position.

3. Install The Step Pedal (**This is often installed incorrectly, Please see below to double check the installation**): 3-1. Remove the two screws from both sides of the Pump using the wrench (one screw from each side), put them aside for the next step; 3-2. Align the Step Pedal with the Pump as shown in the picture 3-2, please ensure it is correctly positioned; 3-3. Secure the Step Pedal and the Pump using the screws (that you removed from step 3-1) and the wrench.

***Double check the following issue:**

Common Issue 1: Step pedal is installed on the wrong side of the pump as shown in the diagram. Common Issue 2: The pedal inside the red circle is upside down as shown in the diagram. Please see the first picture for correct installation.

Step 2. Install the Seat and Back Support

1. Parts you will need for this step (For the parts shown in 1-4, insert each washer to each screw (4 of them in total))

2. 2-1. Turn the seat upside down (can rest it on the box for support); 2-2. Align the back support with the holes on the back of the seat (as shown in 2-2); 2-3. Secure them using the screws and the wrench provided. Keep the seat in the upside down position.

Step 3. Install the Footrest

1. Parts you will need for this step.

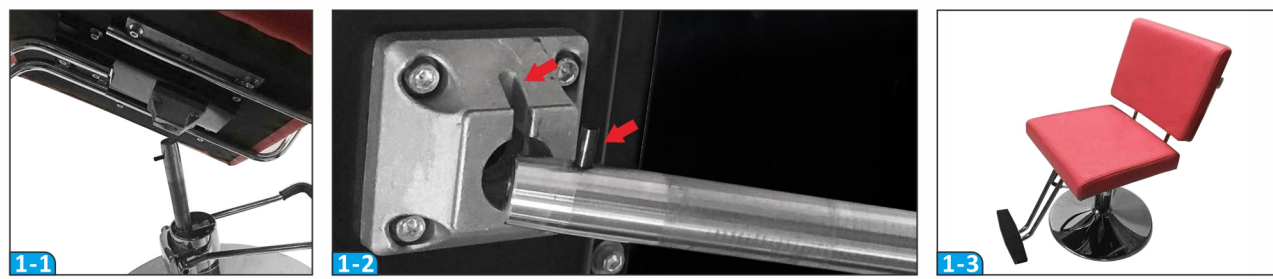

2. Remove the 2 screws + washers from the black panel at the back of the Seat (as shown in the picture), please keep them for the next step.

3. Align the footrest with the holes (where you have just unscrewed the screws in the last step), and secure them together using the wrench and the screws (that were removed from the last step).

Turn the seat to the upright position for next steps

Step 4. Install the top seat

1. Align the hole on the black panel at the bottom of the top seat with the Pump, and insert the top seat to the Pump to secure the top seat (nothing else needs to be done, the top seat will be secured when it is properly inserted onto the Pump).

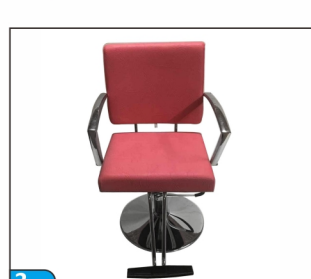

Step 5. Install the arm rest

1. Parts you will need.

2. Install one Arm Rest, and repeat the same process for the other one:

Align the Arm Rest with the Seat and the Back Support, secure the Arm Rest with the Seat first (do not tighten the screws completely yet to leave some room for position adjustment that may be needed when you secure the back support side); Secure the Arm Rest with the Back Support; Tighten all screws on both sides (4 in total).

3. Sit on top seat for awhile to stabilize the seat. Voila! The installation has been completed!

*Tips for height adjustment

To Lower The Seat: step on the Step Pedal all the way down to lower the seat
To Raise the Seat: step on the Step Pedal half way (can do it consecutively to slowly raise the seat to a higher position)
