How to Apply Wall Decals

Whether this is your first time applying wall decals or you've done it before, application is meant to be simple. Always remember, just peel and stick! Your wall sticker sheets may also include numbers (depending on the complexity of the design) next to each cut out wall decal to help guide you to build your decal and know which sticker to place on the wall first, second, third and so on. Follow our guide below as we walk you through the steps of how to apply wall decals.

Step 1

Your wall decals will arrive printed on one or more sheets and packaged in a protective plastic shell.
Open the packaging and remove the sheets. Spread them out on a flat surface near your desired location of application.

Step 2

Peel the first decal from the sheet. It should remove easily from the liner. If handling a large design, consider recruiting a second person to hold the opposite end of your decal so that the two sides do not stick together.

Step 3

Bring the decal to the wall. Slowly smooth the design from top to bottom, pressing down firmly. Ensure that the entire decal makes contact with the wall or surface, and that no air bubbles are trapped beneath the sticker.

Step 4

Examine the placement of your wall decal. If the applied element needs to be moved, simply peel it away from the wall and re-apply. The decal will remove and re-apply easily regardless of how many times this process is repeated.

Step 5

Repeat steps 2-4 until you have applied all included wall decals, or (if you are assembling a large design from multiple pieces) completed the application of your giant wall decal.

Step 6

If you need to move your decals, simply peel them away from the wall and place them back on their liners (or wax paper). Roll up the sheets and store them somewhere safe until they are needed again.

After your wall decal has been applied to the wall, you can remove, reposition, reusable, and add to a completely other wall. The best part is, no sticky residue will be left behind on the wall and the quality of the wall decal will stay just as strong!
