

UMBRELLA BASE

SAFETY & WARNINGS

- This umbrella base is designed to secure your patio umbrella in calm conditions only, where there is no breeze or wind.
- Never open or operate a patio umbrella in wind conditions greater than 5mph (8kph).
- NEVER use the umbrella tilt function in any wind (even a light breeze).
- Always close the umbrella when unattended or not in use. If you are not sitting under it, the umbrella should be closed and secured.
- Always use storage straps to properly secure the canopy to the frame when the umbrella is closed.
- Always use a correctly weighted base for the size of the umbrella being used; more weight is always better than less weight, especially if you intend to use the umbrella in a freestanding situation.
- Failure to carefully observe these safety warnings can result in damage to your umbrella base, umbrella, or property and in extreme cases personal injury.
- If the umbrella is showing ANY signs of stress, or if the umbrella begins to move around excessively even when properly weighted it indicates the wind is too strong and the umbrella must be closed and secured immediately.
- Check you have all the listed parts before you start assembling.
- In the event of missing or damaged parts, contact our customer support team via email.
- Assembly will be made easier if two people work together.

COMPONENTS

A: Umbrella Base
(x1)

B: Sealing Cap
(x1)

C: Umbrella Stem
(x1)

INSTALLATION

Step 1

Screw the umbrella stem (C) firmly into the umbrella base (A). Attach the sealing cap (B) to the corresponding hole of umbrella base (A).

Note: Temperatures below freezing will cause water to expand and may crack the plastic base. It is VERY IMPORTANT to add an anti-freeze mixture to the water inside the base (even if you use sand and water) if you choose to keep your base outdoors when temperatures are likely to fall below freezing. Failure to follow this step will damage the base if the water inside freezes and expands.

Step 2

Place the umbrella stem (C) into the umbrella base (A) and hand tighten the tension screw cap.

NOTE: This base is only suitable for umbrella poles up to 1.5" (38mm).

CLEANING & CARE

- Regular application of a water displacing and penetrating oil to the metal parts of the umbrella base will help to protect them against surface corrosion (remember to treat the bolt and washers on the underside of the base).
- Regular application of a plastic protectant to the base will help to protect it against damage from the harsh outdoor elements.
- During any extended periods of non-use, especially through the winter months your umbrella and the umbrella base should be stored inside in a dry place.
