

# TOWEL WARMER INSTALL MANUAL

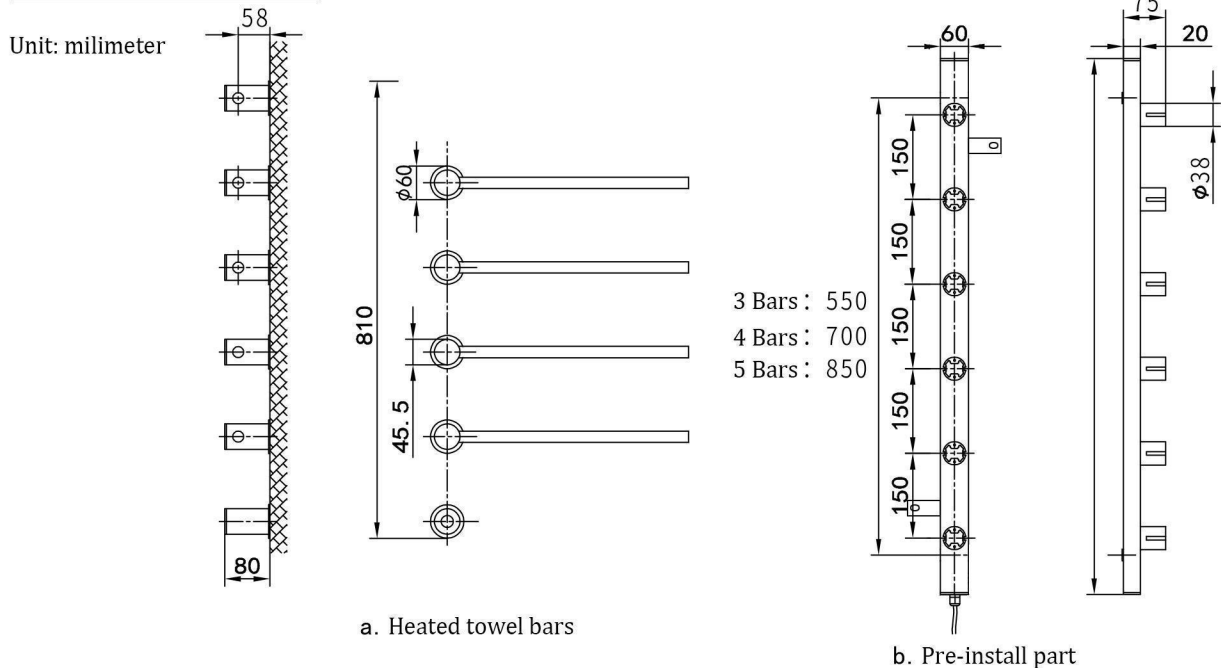

Thank you for your purchase. Please read this manual before installation:

## A Product Parameter:

|              |                                   |
|--------------|-----------------------------------|
| Model        | FT-006                            |
| Hertz        | 50 - 60 Hz                        |
| Rated Power  | 66W (3 Bars) 88W (4..) 110W (5..) |
| Voltage      | 220V                              |
| Heating Time | 1 - 24 Hours                      |
| Temperature  | 45 - 60 degree centigrade         |
| IP Rating    | IPX4                              |
| Mounting     | Embedded                          |

## B Product Dimensions:

## C Precautions for installation and use:

### ⚠ Warning:

1. There is a risk of personal injury or damage to items. Please carefully read all installation guidelines before installation.
2. There is a risk of electric shock in the product, and all wiring must be connected by a certified electrician.
3. There is a risk of electric shock in the product, and the power must be turned off during installation, maintenance, or repair.
4. The yellow/green line is the grounding wire (PE), and the other two lines are reliably connected to the indoor power line zero line (N) and live line (L).
5. To ensure the safe use of the product, only connect the product to a circuit with an automatic leakage protection switch.
6. This product is only for indoor installation and use.
7. Children, the elderly, and those with limited mobility should use this product under supervision. To avoid harm to infants, the product should be installed so that the lowest point of the electric towel rack is at least 600 millimeters above the ground.

### Maintenance instructions:

1. This product should be wiped with a gentle soft towel (or sponge).
2. It is prohibited to use grinding powder, detergents, oils, and alkaline cleaners for cleaning.
3. Do not hit the product shell.
4. When not using this product, be sure to unplug or power off.
5. This product is only used for dry washing and cleaning fabrics. Fabrics containing soap, detergent residue, or other liquids may fade and look like burnt marks, but this fading is only the discoloration of residual soap and cleaning solution. Under normal circumstances, this product cannot reach a temperature that can scorch the fabric.

# TOWEL WARMER INSTALL MANUAL

Thank you for your purchase. Please read this manual before installation:

## D Install Steps:

①

Warning: To avoid harm to infants, the product should be installed so that the lowest heating bracket is at least 600mm above the ground.

- Excavate a groove at the installation position of the wall, with the depth, width, and height shown in the diagram. The embedded box should be level with the cement wall.
- Adjust the level of the embedded parts in all directions, mark the two fixed holes, punch holes with drilling machine, insert wall anchors, lock the embedded parts with self tapping screws, and confirm the level of the embedded parts in all directions again.
- Ensure power outage, correctly connect the ground wire, zero wire, and live wire of the embedded power cord to the incoming power cord, and take various water-proof and moisture-proof measures.
- Use cement mortar to bury the embedded parts, and stick the ceramic tiles (refer to the first page for the size and position of the holes). Pay attention to protecting the threaded holes, installation seats, and power cord plugins from impurities.

②

- Take out the component from the package and insert the decorative flange into the mounting bracket.
- Connect and tighten the aviation plug.
- Plug the connected wire back into the mounting bracket.
- Push in the towel bar, adjust the level, and tighten the bottom fixing screws to secure.

③

- Complete the above steps, and the installation of the entire electric towel warmer is finished.
- Turn on the power, press the switch, and it can be powered on.
- Be careful to touch the horizontal or vertical bars of the electric towel warmer, as your hands should feel that the horizontal bars are slightly hot.
- The temperature and heating time are adjustable and controllable.
