

ASSEMBLY INSTRUCTION

Tips

1. Customer Support

Thanks for your purchase! If your product is damaged, missing parts, or has assembly issues, contact us with clear photos of the problem. We'll provide the best solution quickly.

2. Assembly & Maintenance

Match parts to the manual's numbers. If mismatched, check the manual. First loosely align screws with pre-drilled holes, then tighten one by one. Periodically check screw tightness. Keep sharp/corrosive objects away to avoid damage or injury.

3. Assembly Help

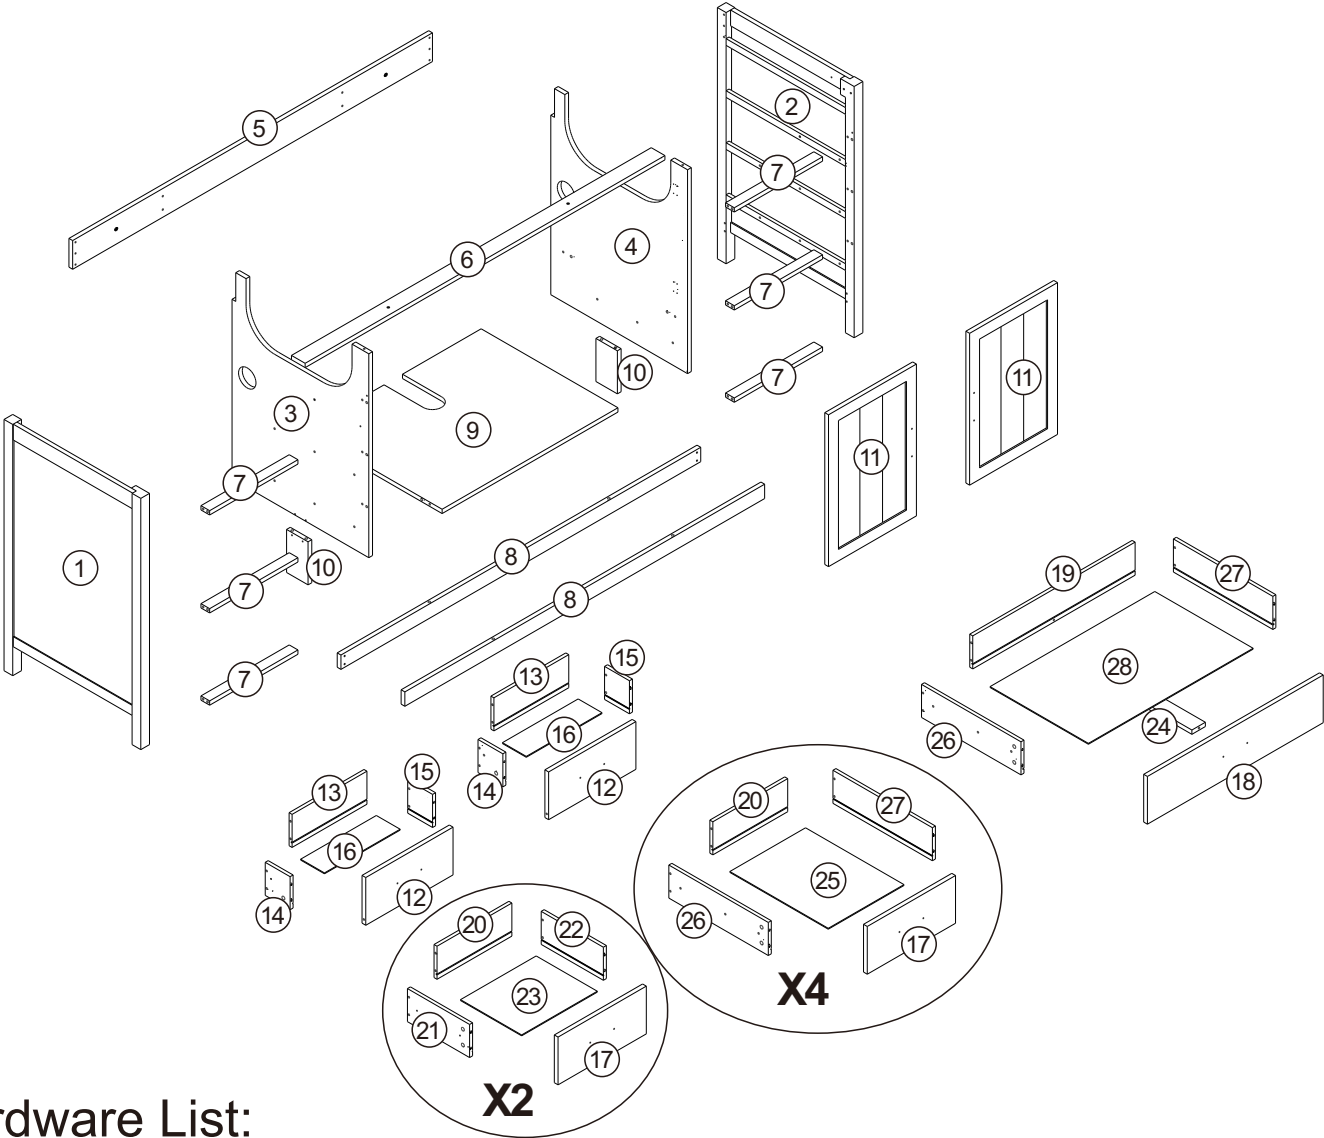

It is recommended that two people assemble the product together.

4.Important Note Regarding Drawer Design

This 60" vanity is designed to work with both single-center and double-side sink countertops. The top two drawers on the left and right are shortened/modified to make space for the sink bases in the double-sink configuration.

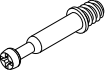

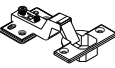

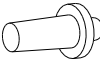

This design is intentional and pre-modified to fit both countertop options perfectly, ensuring full functionality whether you choose the single or double sink top, thank you for your understanding.
