

Installation Instructions

1. Preparation

Lay a soft cloth on a clean floor, then place the tabletop upside down steadily.

Check you have the tabletop, two V-shaped brackets, and screws.

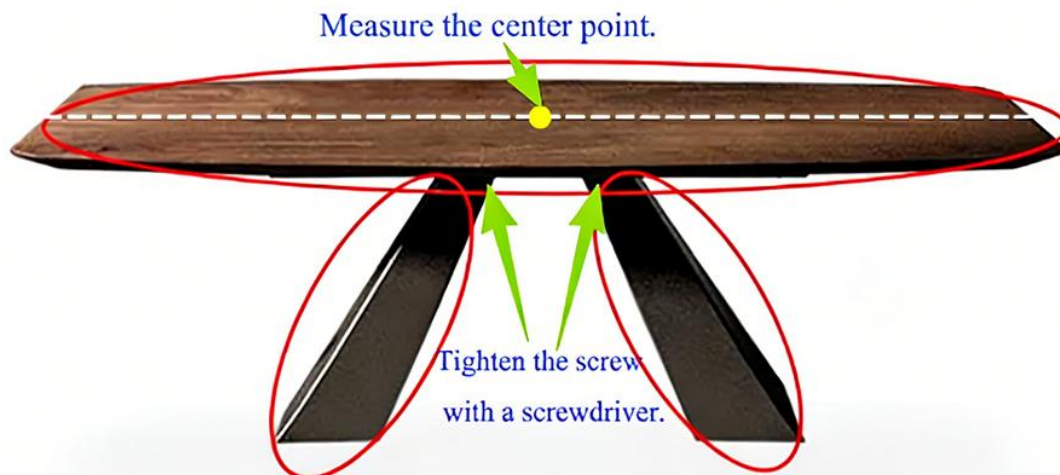

2. Mark positions

Find and mark the center line on the bottom of the tabletop.

Measure 11.8 inches to each side from the center line, then mark the mounting lines for the two brackets.

Make sure the distance between the two brackets is 23.6 inches.

Place the V-shaped brackets on the marked lines, then mark the screw positions with a pencil.

3. Install brackets

Use a screwdriver to slowly drive the screws directly into the tabletop at the marked points.

4. Flip and check

With two people, carefully flip the table upright.
