

Notes

1. Please note that the package does not include beauty and nail tools, etc.
2. Please note that enough space should be reserved around the sterilizer and nothing should be placed on it to ensure stable operation.
3. Please note that the product is only suitable for high-temperature-resistant tools, such as scissors, metal products, and glass bottles. It is not suitable for inflammables such as cotton, plastic, and paper.
4. Please read the manual carefully and pay attention to the precautions before use. When the machine is working, do not touch it with your hands to avoid burns. Please be aware of electrical hazards and keep the product away from children.
5. Please note that there may be some scratches, burrs, and other issues on the surface of metal products after processing. This is a normal phenomenon and does not affect use.
6. After sterilization, please wait for the items to cool down before removing them to avoid burns. The heat generated by the disinfection cabinet itself will be released through the heat dissipation holes, but the heat in the disinfection cabinet will not be discharged. Please open the door to dissipate heat after use. Please ensure that the surface of the tool is free of water when disinfecting.
7. Please allow the slight color difference caused by the shooting light and 1-3cm error due to manual measurement, and make sure you do not mind before you order.
