

Furniture Care

committed to providing excellent value, function and performance in furniture. Our quality design and craftsmanship makes it possible for you to enjoy your purchase with minimal care. Attention to a few basic points will help protect your furniture and ensure that it looks great year after year.

- Avoid exposing furniture to strong sunlight, heat outlets, open windows or dampness. Ultraviolet rays from sunlight can damage wood finishes and can change the color of the wood after time.
- Liquid spills will damage furniture if not removed promptly. Coasters are recommended under beverage glasses and saucers under cups and flowerpots. If a spill happens, wipe the liquid from the surface immediately with a soft, slightly damp cloth, in the direction of the wood grain.
- Use protective pads under hot dishes, utensils or cooking appliances. Heat creates a chemical change in the finish of the furniture, which can result in a white spot.
- Occasional polishing with high quality, non-silicone furniture polish will enhance the beauty of the wood finish.
- Be sure to use the same type of polish consistently. Your furniture will appear cloudy or streaky if oil-based and wax-based polishes are interchanged.
- Never use soap and water on furniture. Water can penetrate the finish and raise the grain on wood, causing damage.
- Small scratches may be covered with a scratch remover or touch up stick. These can be purchased at most paint stores.
