

Congratulations on your purchase of this ENERGY STAR labeled, fixture. Fixtures that carry the ENERGY STAR label meet efficiency and quality criteria to assure that consumers will not sacrifice performance to save energy and reduce pollution generated by electricity.

This new generation of fixtures for the home is designed to emit the equivalent amount of light (lumens) as incandescent models, while matching the color rendering properties that consumers are accustomed to in their homes. The efficient light bulbs used in these fixtures also last as much as twelve times longer than typical incandescent bulbs. Convenience is also an important feature of ENERGY STAR labeled fixtures. The fixtures start immediately and operate at a minimal noise level compared to the older generation of fluorescent fixtures.

Reliability and safety performance criteria must also be met by any fixture carrying the ENERGY STAR label. The fixtures carry a three-year warranty (excluding lamp) and are tested to applicable National Electrical Code and ANSI/IEEE Standards. Please refer to warranty information below.

The manufacturer is dedicated to the design and manufacturing of fixtures that meet the criteria specified by the Environmental Protection Agency (EPA) ENERGY STAR program. Dedication to design using these specifications will help save the Earth, while saving our customers money. For more information about ENERGY STAR Labeled Residential Light Fixtures, please contact Manager, Energy Star Residential Light Fixture Program, U.S. EPA (6202) 1200 Pennsylvania Ave., Washington, D.C. 20460.
