

Installation Instructions

Do NOT apply planks over soft or unstable popcorn. If the popcorn is loose, it must be removed first. Soak it with water and scrub it off.

The ceiling surface must be stable. If it's loose or chalky, apply a primer before tiling.

Clean the ceiling thoroughly: remove dust, grease, wax, old flaky paint, and dirt.

Fill any cracks or flaws with filler, gypsum, or mortar.

You will need: **Utility knife, Adhesive & Caulking Gun, Pencil, Measuring Tape.**

Optional gloves, caulk.

Take your first plank and spread adhesive about ½–1 inch away from the edges.

Start installation along one side of the ceiling and continue across, similar to laying hardwood flooring. When you reach the edge and a full plank won't fit, measure

the remaining gap, flip a plank over, and mark the cut line with a pencil. Trim it to size

and place it in the space. For the next row, begin with the cut-off piece from the previous row.

Keep going in this pattern until the ceiling is fully covered.

Adhesives we recommend: **Loctite Power Grab All-Purpose; AcrylPro Professional Tile Adhesive.**

If you decide to paint the planks, use only **water-based paint!** Other types of paint may melt the material.

Recommended Installation Patterns

Please note, that there is no definitive pattern to install these planks. You may try different variations.

Staggered (Running Bond / Brick Style)

Each new row starts with the cut-off piece from the previous row. This avoids having all seams line up and creates a natural flow. Strongest and most common method (similar to hardwood flooring).

Alternating Stagger

Start the first row with a full plank, then use the leftover piece from that row to start the next row. Alternate between full plank and leftover pieces for subsequent rows. This creates a natural, visually appealing stagger while minimizing waste and avoiding repetitive seam patterns. It's easy to follow and works well for most rooms.

Straight Lay (Aligned Seams)

Planks are installed in straight rows with all seams aligned. Gives a very uniform, grid-like look, but can emphasize seams.

Random Stagger (Mixed Lengths)

Start each row with planks cut to random lengths. Creates a less formal, more rustic look.
