## Owner's Manual and Operating Instructions for 300 Lumens Solar Lantern with LED bulb

**CAUTION:** Read all Warnings and Operating Instructions before use and retain for future reference.

### ⚠ CAUTIONS

1. Keep away from children
2. This product is not a toy
3. Do not look directly into LED as this may cause damage to your eyes
4. Turn off the light when charging

### BEFORE FIRST USE, FULLY CHARGE THE LANTERN

The Lantern LED power indicator will change to green color when full.

### CHARGING

#### USB: \*

It is recommended that you fully charge the unit before first use using the included USB adaptor. ALWAYS ensure that the unit is OFF when charging. NOTE: Only use the USB adaptor that is provided with this unit. Using an adaptor with different voltage, or one that is not intended for the unit, may cause damage to unit, damage to personal property or personal injury.

#### SOLAR:

Select a location with full, direct sunlight, where panel can receive at least 8 hours of sunlight each day. Shadowed locations will not allow the battery to fully charge and will reduce the hours of night time lighting.

#### IF YOUR SOLAR LIGHT DOESN'T TURN ON AT NIGHT:

If the weather is cloudy or overcast during the day, the battery may not recharge fully to operate properly at night. The light must receive direct sunlight every day to fully charge the battery. If the solar light does not receive enough sunlight during the day, it will be recharged during the next sunny day and then resume normal operations.

\*Input Voltage/Current : 5.1V/1A

Output Voltage/Current : 5.1V/1A
