

TEAK

DESCRIPTION

Teak has well known qualities that make it superior to other woods for outdoor furniture applications. The beautiful dense grain and high oil content of teak allow it to resist rot, moisture, warping and splintering.

DURABILITY

Teak is a premium material that is well-suited for use in outdoor environments. If left untreated, teak weathers naturally to a beautiful silver gray color. Some surface roughness may develop, especially at the end grain, but over a period of about one year, the natural weathering process will stabilize. Under normal conditions and if used as intended, the expected lifetime of teak wood products is fifteen years.

CARE AND MAINTENANCE

Teak products should be rinse and cleaned using a sponge or soft bristle brush with a mild cleanser. Exposed to the outdoor elements of sun and rain, shorea weathers naturally to a beautiful silver gray color unless treated. If you wish to slow the graying process or enhance the natural wood color, apply Cabot Australian Timber Oil or other quality timber protector seasonally.
