

Thank you for purchasing this LuxenHöme solid wood outdoor furniture. It has been manufactured to the highest standards of safety and quality.

Care Instructions for Solid Wood Outdoor Furniture

To help your furniture age gracefully and stay beautiful, follow these simple care tips:

🔹 **Cleaning & Maintenance** – Gently wipe surfaces with a damp cloth to remove dirt and dust. Traditional cleaning methods like scrubbing with soapy water may temporarily refresh your wood furniture, but can gradually degrade its finish and overall quality over time. For a more lasting and gentle solution, switch to a high-quality wood wax. Premium wood waxes deliver an immediate gleam and help preserve the furniture's natural beauty with regular use. Made with superior ingredients, they offer long-term reliability while protecting the surface from wear. For everyday upkeep, lightly dust your furniture with a slightly damp microfiber cloth to prevent buildup and surface dulling. Be sure to remove dust before applying wood wax, as accumulated residue can compromise the waxing process and leave uneven results.

☂️ **Rain Protection** – Heavy rain can warp, crack, or discolor solid wood. Use outdoor furniture covers that are breathable and water-resistant. Alternatively, store items indoors during prolonged wet weather or storm seasons.

☀️ **Sun Protection** – Direct UV rays can fade and weaken the wood. Whenever possible, position the furniture in shaded areas such as under a porch, tree canopy, or patio umbrella. This not only preserves color but also reduces the risk of drying and splintering.

🪵 **Surface Care** – Reapply a UV-protective sealant or wood oil (like teak oil) annually to maintain the finish and nourish the wood. We recommend applying wood oil at least once a year to keep the wood protected, conditioned, and looking its best. Always clean and dry the surface before application. Light sanding may be required to remove weathered layers before sealing.

Teak Oil Tip: Teak oil is infused with ingredients to help prevent mildew and algae; it penetrates deeply into the wood as it expands and contracts with changing temperatures. It replaces natural oils lost over time and forms a thin surface coating that resists chipping or flaking.

📅 **How to Know When to Apply Wood Oil More Often** – While annual oiling is recommended, some conditions may require more frequent care. If your furniture is exposed to strong sun, heavy rain, high humidity, or wide temperature swings, the protective layer can wear down faster. Pieces placed in fully exposed outdoor areas, near pools or sprinklers, or directly on grass or soil may also dry out more quickly. Softer woods and lightly sealed surfaces tend to absorb oil faster and may need additional applications. If you notice fading, dryness, rough texture, or water no longer beading on the surface, it's a sign the wood is ready for another coat.

👉 **Teak Oil Tip:** Teak oil is infused with ingredients to help prevent mildew and algae; it penetrates deeply into the wood's surface as it expands and contracts with the varying temperatures of the weather. It seeps into the wood replacing the natural oil existed in the wood. A thin layer surface coating will prevent chipping or flaking with time.

 **Avoid Abrasive Tools:** When cleaning or prepping for resealing, skip hard-bristled brushes or rough pads. Opt for a soft-bristle brush or microfiber cloth to prevent scratching.

 **Keep Elevated:** If your furniture sits on soil or grass, consider elevating the legs slightly with risers or rubber pads to prevent moisture absorption from the ground, especially after rain.

 **Off-Season Storage** – During off-seasons or extended periods of non-use, store furniture in a dry, well-ventilated shed or garage, or cover it to protect it from damage. Make sure the cover is waterproof and secured to the furniture. Ensure it's placed on a level surface and not stacked, which can lead to warping or cracking.

 **Bonus Tip:** Check periodically for signs of mold, especially in humid climates. Spot-clean affected areas with a mixture of white vinegar and water, then allow to dry completely in the sun.
