

Installation Diagram

*Installation note

1. Before installation, be sure to drain water to remove impurities in the pipeline and avoid impurity particles from blocking the valve core and nozzles of the shower.

2. It is recommended to wrap the faucet with cloth for safety and prevent the surface from being scratched.

*Installation steps

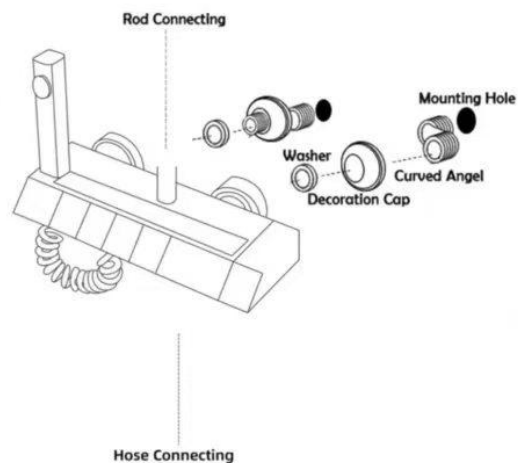

1. Wrap the two curved angels by the raw material tape and screw them into the mounting holes by a wrench.

2. Put the decorative cover on the curved angel.

3. Install the curved angel washer into the hexagonal nut on the back of the faucet and align the faucet to the position of the curved angel.

4. Rotate the position of the two curved feet to correspond to the nut position of the faucet.

5. Wrap the outer end of the curved leg with a raw material tape, and use a wrench to tighten the nut (it is recommended to wrap the nut with a cloth to avoid scratches on the surface).

*Rod Fixed Base Installation

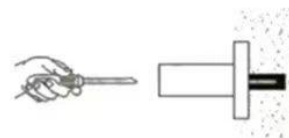

Note: Please mounting the main panel, connect the top rod and bottom rod, then connect to the main panel to make sure the position of the mounting hole of the rod fixed base.

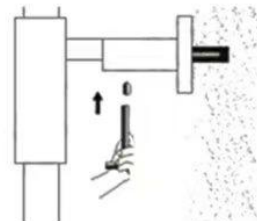

1. Mark the hole and drill.
