

Metal Hanging Instructions:

Please follow the instructions below for Metal wall art:

You will need :

Screw Driver

Measuring Tape

Screws
(included in your order)

Hooks

STEP 1:

Determine where you would like to hang your metal art. Your metal art has the wall bracket built into the actual wood frames.

The top part of each frame is designed with a lip, which you will hang over the included screws.

STEP 2:

For multi panel art, we recommend using 2 screws per panel.

For single panel art, we recommend using 4-6 screws, depending on the size.

STEP 3:

Using a measuring tape, measure the distance from your first set of screws to the desired placement of your second panel, mark the wall and insert the next set of screws.

Repeat the same measurement and screw insertion process per number of panels to ensure even spacing.

For the single panel art, measure the distance between the first and second screw and repeat per number of desired screws.

Lip for hanging over screw
