Warning:

1. When installed, there will be a small part of the clip left outside, which will not completely coincide with the shelf hole. After placing a heavy object, it will become tighter and tighter.

2. Gaps between plastic clips: structural design rather than a quality flaw, which makes the shelf anchored firmly.

3. The end with a notch is downward, which is designed to help determine the direction of the wire shelf. At the same time, according to the text and indication signs on the shelf and clips, you can confirm the correct installation steps.
