

Installation & Assembly

Step 1: Choose Location

Ensure the solar panel faces south (Northern Hemisphere) or north (Southern Hemisphere) without obstructions.

Mount 2–3 meters above ground with a 15°–30° tilt for optimal sunlight.

Step 2: Mount the Light

Secure the bracket to a wall/ground using screws.

Insert the light into the bracket slot and tighten the fixing screw.

Step 3: Initial Use

Remove the solar panel protective film and toggle the switch to “ON.”

Charge fully under direct sunlight for 8+ hours to activate the battery.
