

Owl Solar Light Garden Statue

PURE GARDEN

PAVED AND GARDEN ESSENTIALS

ASSEMBLY AND OPERATING INSTRUCTIONS

 Please operate strictly according to the Instruction. Don't modify the product.

CONTENTS

HOW SOLAR LIGHT WORKS

During the day, the solar panel collects sunlight and converts it into electrical power stored in the rechargeable battery included. At night, the photosensor built to the solar panel, sensing the absence of light, turns on the solar light automatically using the electricity stored during the day. The more sunlight the fixture gets, the stronger the charge will be and the longer your fixture will illuminate at night.

PREINSTALLATION

- Ensure the mounting location for your solar light allows the solar panel to receive a full day of direct sunlight.
- Do not install in shady areas as this will significantly reduce performance at night.
- The Lamp should receive a minimum of 8 hours of sunlight per day for optimal performance at night.
- Be sure the location is not near the ambient light from other light sources during evening hours. These light sources may affect the photosensor and cause the lamp to turn off.

ASSEMBLING AND INSTALLATION

1. Remove all contents from box.
2. Each fixture has an ON/OFF switch. Before installing, slide or press switch located on the bottom or on the top of the fixture to the ON position. (Fig. 3)
3. Assemble all parts (if required) and place the fixture in chosen location.

TO REPLACE THE BATTERY

1. Remove all the screws that secure the cover to the battery compartment.
2. Remove old battery and replace with new one.
3. Replace the cover and secure the screws.

NOTE: Using similar rating and type that shipped with the original solar light. Make sure to install the battery matching the correct polarity (+/-).

Caution: BATTERY MUST BE RECYCLED OR DISPOSED PROPERLY.

TROUBLE SHOOTING TIPS

1. **Battery not fully charged:** Make sure the location for your solar light allows the solar panel to receive direct sunlight every day. If the solar panel does not receive enough sunlight during the day (e.g. due to cloudy or overcast weather conditions), it will be recharged on the next sunny day and resume operation.
2. **Other light sources:** The location of your solar light is near the ambient light from other light sources, which affect the photosensor and turn off the lamp. Relocate the fixture or eliminate those other light sources.
3. **Battery may need to be replaced:** The battery is reaching the end of its lifespan and need to be replaced.

MAINTENANCE

Periodically clean the solar panel with a wet cloth. Do not apply any solvents or chemicals. In case if the light isn't going to be required in a long time, remove the batteries.
