

SLIDE-A-SHELF™

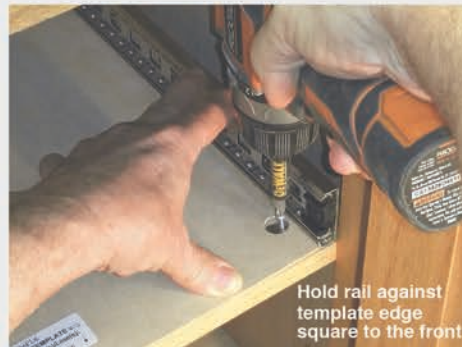

Reach What Matters

Optional Quick Start Installation Page

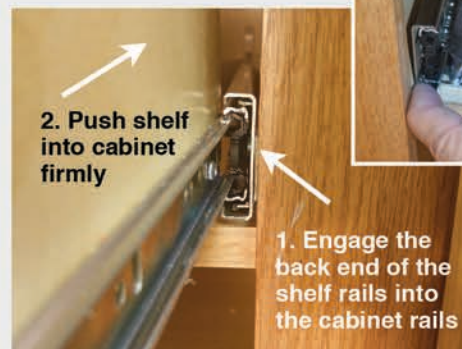

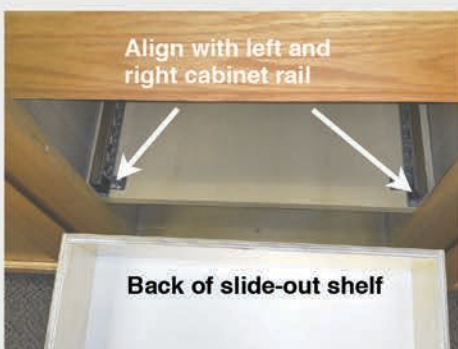

NEW!
Adjustable rail bracket

If you have previously installed a Slide-A-Shelf™ made-to-fit slide-out organizer or are familiar with the process, feel free to reference this Quick Start page to install your slide-out(s). For more detailed instructions, please see our helpful video "The Installation Process" on the Measure and Install page of our website.

- In the target cabinet opening lay the left and right cabinet rails into place parallel with each other, overlay the template between the rails aligning the front L-brackets with the template's corner access holes.
- Position the rails between the template to be parallel and square to the front of the shelf/cabinet, making certain both inner rail extenders clear the opening by sliding them out and back in. Using the #6 x 5/8" pan head screws provided drive a screw thru the small **round** hole in both the front and rear L-brackets of the right rail. *Do not use the oval holes.*
- Holding the template in place with both rails up against the left and right edges of the template, as you did on the right side/rail, drive a pan head screw into the center of the **oval** holes in both the front and rear L-brackets of the left rail. Remove the template.

- For both rails, slide the INNER ball bearing carriage all the way forward to the stop, then insert the slide-out shelf or organizer into the cabinet rails as shown and test the in and out glide motion to be sure it is smooth, not too tight and not too loose.
- The end of the shelf rails are placed into the plastic guide clip of their corresponding cabinet rail. If the shelf seems to tight or loose, loosen the screws in the oval holes of the left rail L-brackets and nudge the rail to the right or left as needed and re-tighten. Re-test the motion and repeat to your satisfaction.
- When you are satisfied that the rail alignment results in smooth sliding action, remove the slide-out/organizer and drive a screw into the round hole of each L-bracket on the left rail. This will lock the rails into position.

CONGRATULATIONS! Your slide-out installation is complete. We are confident you will enjoy your made-to-fit Slide-A-Shelf™ for years to come. Comments? Questions? Call toll-free 800-507-0522.
