If the equipment is powered off, you can install a spare battery and discharge it. Note: If the spare battery runs out, you can purchase a 9-volt battery and replace it by following the installation steps below. ( When installing the toilet for the first time, a spare battery needs to be installed.)

Step 1. Put the 9-volt battery into the battery box.

Step 2. Cut off the power supply and find the power outage flushing wire interface behind the toilet.

Step 3. Connect the 9V spare battery to the toilet's connection cable and place the battery in a dry area behind the toilet.

**Attention: install a backup battery for flushing during power outages. Press and hold the flush button on the side of the toilet for 3 seconds to flush it.**

## Foam liquid replacement and installation

Step 1. Push the back cover of the toilet out to the back and pick up the back cover of the toilet.

Step 2. Remove the connecting tube of the foam bottle.

Step 3. Fill an empty bottle with tap water, and then put the effervescent tablets into the bottle to dissolve.

If you use up this bottle of foam solution, you can purchase a separate concentrated foam solution or take detergent to water to replace it.

Step 4. Connect the filled foam bottles and tighten them before putting them into the empty slot.

Step 5. After the accessories are installed, reinstall the back cover of the toilet to its original position.
