## DIRECTION FOR USE

### OPENING THE SAFE

1. Insert the key into the lock.
2. Turn the key clockwise to open the latch.
3. Store unloaded guns and rifles securely inside your safe

### CLOSING THE SAFE

1. Close the door and turn the key counter-clockwise.
  2. Remove the key and store in a safe place.
- IMPORTANT!** DO NOT store your keys inside the safe!

### INSTALLING THE SAFE

Select where you want your safe positioned and set it in place. Once positioned, we require it be anchored to the floor for additional safety and security. Locate the anchoring holes in the bottom floor and back panel of safe. Determine if you will be anchoring into wood or concrete floor. If you are anchoring into a wood floor, use lag bolts. The length of the lag bolt will be determined by the thickness of the floor but try to use at least 2 inches. If you are anchoring into a concrete floor, use concrete sleeve anchors, which are at least 2 inches long. The holes for the anchors can be drilled through the holes that are already in the safe. You do not need to move the safe to install the anchoring bolts.

**NOTE:** After the anchor bolts are installed, carefully open and close the safe door and check for smooth operation of the locking mechanism. If any resistance is encountered, check the safe for being level.

**WARNING:** The safe **MUST BE** bolted to the floor before use. Serious injury could occur if the safe is not bolted down. If the safe is sitting on carpet or an uneven surface, it could topple over when the door is open.
