If it wobbles, lift the Table to some 30cm to 50cm height from the ground.
Keep your feet and toes well away from the drop zone.
Drop the Table freely and vertically with the four legs, hitting the ground, at the same time.
This Drop Test will help to ensure that all the screws and gaps to all reach full alignment status.
Test again for evenness on a LEVEL SURFACE.
If no wobbles found, proceed to tighten all the screws.

CAUTION: When tightening these screws, tighten sequentially.
DO NOT tighten any screw fully and then towards the next one.
This would cause the frame to warp.
If there is still wobbles, loosen the screws and execute this same drop tests.
