

Assembly Instructions

(Tools Required- Not Included)

To mount over a fence or deck rail, you will need to attach the bracket with narrow slots to the back of the planter, as shown below, using the included screws. For wider rails, connect as shown in left image. For more narrow rails, connect as shown on the right.

- * Nuts should always be on opposite side of wood rail.
- * Since the nuts are self-locking, it will save time using a screwdriver to hold the screws when unscrewing the nuts.
