Pendant Light Instruction

Safety Warning

- Shut off power at the breaker panel before starting any work.
 - Verify the wires in the ceiling box are not live with a non-contact voltage tester.
 - Fixture is rated for 3 × E26, Max 40 W each (bulbs not included).
 - Large size: 4 × E26, Max 40 W each.
-

Installation Steps

• Step 1: Install the Hanging Plate

1. Remove the metal hanging plate from the fixture.
2. Hold it to the ceiling junction box and fasten with the supplied machine screws.
3. Tug lightly to confirm the plate is secure and level.

• Step 2: Connect the Wires

1. Strip about ½ in (13 mm) of insulation from fixture and ceiling conductors.
2. Hot: connect fixture black to house black (hot) with a wire nut.
3. Neutral: connect fixture white to house white (neutral).
4. Ground: connect fixture green/bare to house ground.
5. Neatly tuck all spliced wires into the junction box.

• Step 3: Attach the Magnetic Canopy

1. Lift the canopy toward the hanging plate.
2. Adjust the canopy's internal magnets so it just touches, then snaps flush to the plate.
3. Give a gentle twist to be sure the magnets are fully engaged and the canopy is steady.

• Step 4: Remove the Thread-Protection Sleeve

Unscrew and discard the small plastic sleeve protecting the metal threads at the bottom of the stem.

• Step 5: Install the Shade

1. Align the shade's center opening with the threaded stem.
2. Slide the shade upward until it rests against the canopy hardware.

• Step 6: Lock the Wooden Stick Finial

Thread the wooden stick finial onto the exposed stem and hand-tighten until snug.

• Step 7: Install the Bulb

Screw E26 bulbs (Max 40 W each or equivalent LED) into each socket. Turn clockwise until each bulb is firmly seated.

Final Check

Restore power at the breaker, flip the wall switch, and confirm:

- All bulbs illuminate.
- The fixture hangs straight without wobble.
- No wires are visible and the canopy sits flush to the ceiling.
