## How to charge other devices by lantern

1. Press and hold the power button to turn off the power. Please do not charge with the power on.
2. Open the port cover
3. Plug in the USB charging cable at the output port Plug in the USB charging cable at the output port and connect to an external machine. \* The cable for charging is not provided. Please use the cable that comes with the external machine

- The output of this product is 1.5A. Please do not use it if the device being charged does not support 1.5A.
- Damage or accidents to this product or rechargeable products caused by the use of unsupported equipment are not warranted.
- Please check with the manufacturer of the charged device to see if it is supported. The battery life of the recharged device may be shortened due to different specifications of the recharged device.
- This product is not guaranteed to charge all external devices. The charging speed may be very slow or almost impossible due to the specification of the device and cable being charged.
- Due to the specification of the charged device and cable, it may only charge up to 90-99%.
- Do not charge external devices at the same time as charging the unit.

## How to charge your lantern

### Charging method when using a USB (Type-C) charging cable

1. Press and hold the power button to turn off the power. Please do not charge with the power on
2. Open the port cover
3. Plug the included USB (Type-C) charging cable into the input port of the device, and connect the other end of the charging cable to your own USB adapter or a computer's USB port. The charging light on the display will light up red during charging. The charging light will turn green when charging is complete.

4. Unplug the USB charging cable to close the port cover

## Caution

- Do not use a USB charging cable that is not included for charging
  - When using the device for the first time, please fully charge it.
  - When charging with a USB hub, it may not charge properly. Be sure to use the USB adapter or the USB port on your computer to charge in an environment where a stable power supply is available.
- ! It will take 4 hours to charge when all the power is used up fully. When the charging light shows green, please unplug the USB charging cable.
  - ! About the use during the charging Please do not use this unit while charging. This will accelerate battery deterioration and cause battery damage.
  - ! When using near water, please make sure the port cover is closed before using.

## The use of hand-cranked power charging

1. Press and hold the power button to turn off the power. Please do not charge generate electricity with the power on
2. Pull out the handle
3. Rotate the handle clockwise, please rotate slowly at the beginning and gradually increase the rotation speed. The charging light will light up red when the handle is rotated. Make the handle rotate 130~150 times per minute to charge, and rotate for 30 minutes to charge the device with a power of 200MAH.
4. Pack up the handle.

## Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

## How to use FLASHLIGHT, camping lantern or SOS ALARM etc.

### FLASHLIGHT

1. Press the M button, the first time is long on, the second time is flashing, the third time the light is off.

### Camping Lantern
