## Parts list:

# Installation steps

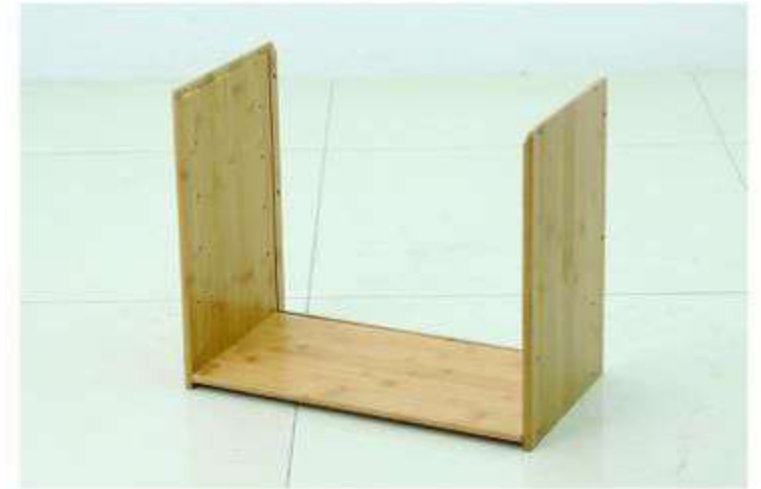

Bottom plate A with grooves facing up

1. Take out the side support and install it from the bottom plate A using pointed screws. Ensure that the side support groove is aligned with the bottom plate A groove

2. Take out the side support and install it using pointed screws to the right. Align the groove on the side support with groove A on the bottom plate

3. Put up brackets

4. Take out the small back plate and insert it along the grooves

5. Take out bottom plate B and install it with pointed screws. Make sure that bottom plate B faces upward, and align the single groove with the side bracket groove

6. Take out the large backplane and insert it along the grooves

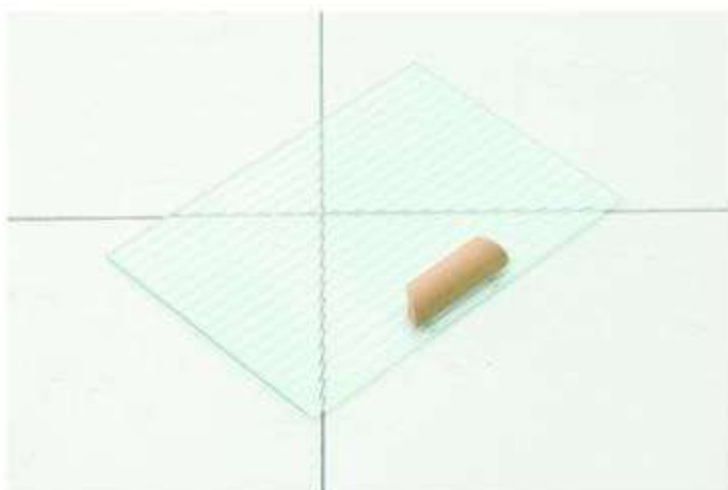

7. Take out the bolt and insert it into the hole of the side support

8. Take out the active plate and place it on the bolt

9. Take out the top plate A and install it with pointed screws  
Do not tighten the screws at the mark

10. Take out door panels and door handles and install them with flat screws

11. Take out the installed door panel and insert it into the double grooves of the top plate A and the bottom plate B  
Notice where the notches fit inside and out

12. Insert the other door panel in the same way

13. Take out the pointed screws and tighten the marks

14. Take out the metal bracket and install it with locking screws and nuts

15. Take out the top panel B and screw it into the metal support using large screws
