

Razor™ 9" Round Rainfall Showerhead

To Install Directly onto Your Shower Arm

1. Remove your existing shower head, if any, by turning it counter-clockwise. Remove Protective Cap from Ball Joint Nut (Fig. A).
2. Screw Shower Head with Washer in place onto your Shower Arm and hand-tighten. You can also use wrench or pliers (Fig. A).
3. If desired or needed, wrap some plumber's tape (included) around shower arm threads to secure connection from leakage

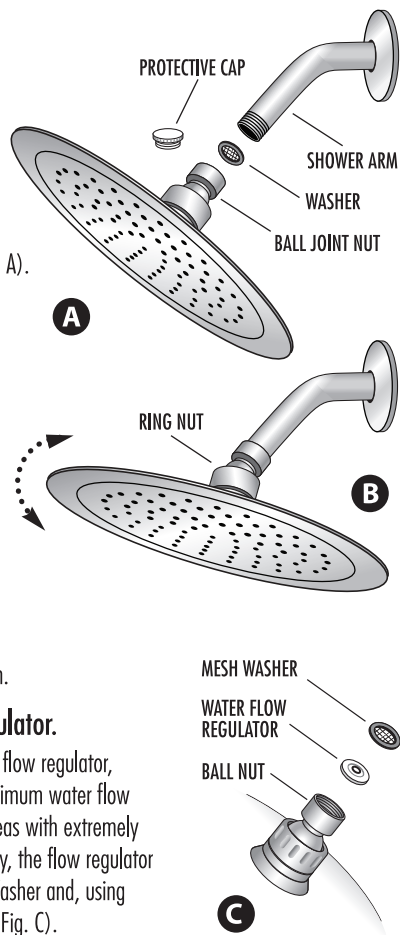

NOTE: If your shower arm has a ball on the end of it instead of threads, it will not work with this shower unit and will need to be replaced with a standard shower arm available at most plumbing supply stores.

To Adjust Shower Head Angle and Tilt

Loosen Ring Nut of Shower Head and swivel Shower Head to desired position (Fig. B). Hand-tighten Ring Nut to lock Shower Head position.

Low Water Pressure? You can remove Water Flow Regulator.

As mandated by U.S. federal law, this shower is equipped with water flow regulator, located inside connection nut under the mesh washer, that limits maximum water flow to 2.5 gallons (9.5 liters) per minute at 80 psi water pressure. In areas with extremely low water pressure causing the shower water flow to be unsatisfactory, the flow regulator may be removed. To remove Water Flow Regulator, take out Mesh Washer and, using sharp-point tool, remove Water Flow Regulator located underneath it (Fig. C).

For best performance, use with HotelSpa®
11" Height/Angle Adjustable
Solid Brass Extension Arm

Item #5703

Can be purchased separately

Imported

To Install with Adjustable Extension Arm

Follow Installation Instructions that come with extension arm.
Installation directions may vary depending on extension arm type.

Cleaning Instructions Remove mineral deposits from jets by rubbing nozzles with your finger, clean chrome surfaces by wiping them with 50% white vinegar/50% water solution. Do not clean or rinse with harsh chemicals, heavy-duty cleaners or abrasives that may damage finish and void warranty.
