## Pull the kitchen basin faucet

### Before Installation:

All the materials are compiled according to the newly published product materials. The company reserves the right to change the characteristics, packaging or types of products available at any time without notice.

The instruction manual includes important installation, maintenance and cleaning contents, please give these materials to the user to read.

### Note:

1. Be sure to thoroughly flush the water supply pipe to remove impurities from the pipe.
2. If you are installing a new sink, install the faucet on the basin first.
3. Work pressure of Huajiu: 0.1MPa to 0.5MPa. A pressure reducing valve must be installed when the water pressure exceeds 0.5Mpa. The highest work of shower temperature and ambient temperature: 60 °C. Please pay special attention to the arm tube connected with the flower wine should be kept away from the heater, otherwise it is possible damage the flower wine and its seals, and even cause harm to the user.

### Instructions for Use:

The handwheel switch rotates to the left to set the temperature of cold water, mixed water and hot water, and to the right to turn off the main outlet switch.

Press the button on the left to control the way of water outlet.

\* The handwheel is the main switch, explosion-proof pressure (2.5MPa), each time after use must be closed, if there is no closing caused by the loss, the wood company will not be responsible.

### Mounting size:

## Installation Procedure

1. Install the gasket (1), face down with the gasket, install the faucet, and place the handwheel on the right.
