

INSTALLATION INSTRUCTIONS

1. Turn power off and consult a qualified electrician to install your light fixture.
2. Mount the back plate from the ceiling canopy to your ceiling. It should be attached to the structure of the building. Make sure your power supply and ground wires from the electrical outlet are protruding down through the center hole of the back plate.
3. Assemble your shades as per the instructions included with the shades, but instead of using the single round canopy, each shade should be mounted on the finished portion of the ceiling canopy.
4. To make it easier to put together the wire connections you may want to connect the shades together with a jumper wire then connect the jumper wire to the power supply. Make the connections as per the instructions included with each shade.
5. Raise up the ceiling canopy to the ceiling plate taking care to tuck in all the wires and push it up until the screws on the back plate protrude down through the finished canopy and fasten with the ball nuts provided.
