Congratulations on your purchase of our large metal wall clocks that complement any room with the industrial look and functional features!

Important: For our clocks the clocks hands and motor are easy to install or remove by hands. In order to make your clock in perfect condition please read the user manual thoroughly before using.

Manual setting: please make sure you turn the red hand setting knob on the motor to adjust the time. Don't use your fingers to move the clock hands directly as it will be damaged.

What could I do if the clocks don't work or clock hands loose?

Please follow the instructions to check and install----

1. Insert the battery in correct position according to (+) and (-)making in the battery compartment. The clock will not work if you put it by contrary. Note: Carbon Zinc battery is the best to make sure its long time using.
2. Make sure the two clocks hands are parallel on the clock face. If the clocks hands are a bit bend or overlapping, please make them flat again and re-install both.
3. During shipping the clocks hands may be a bit loose or droop which may effect the clock work. Don't worry it is not quality problem just need you remove all the parts as we showed, and re-install it to make everything perfect.
4. If the clock still can't work please turn the brass nut several times,pull out and then insert again to re-start the clock.
