## Mantel/Shelf Mounting Instructions

**Step 1.** Remove all screws from the bracket. Both bracket screws and the top screws.

**Step 2.** Once all screws removed, remove bracket from the mantel/shelf. Now align the metal bracket in the location where the mantel/shelf will go.

**Step 3.** Use the same Bracket Screws to attach the bracket to the wall. There are holes every 4 inches. It is critical that at least 2 screws attach to the studs in the wall. If screws are not fastened securely to studs the mantel/shelf will not stay in place. While attaching the metal bracket it is critical that it is level. This will make the mantel/shelf level.

**Step 4.** Slide the mantel/Shelf back into the slot and attach the top screws back into the top of the holes.

The floating shelf is rated to hold up to 75 pounds if the instructions are followed.
