INTRODUCTION TO NINE-DRAWER CHEST INSTALLATION

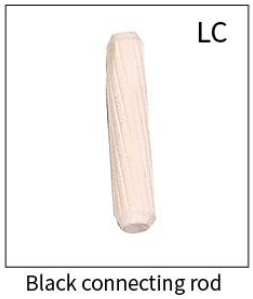

Black connecting rod

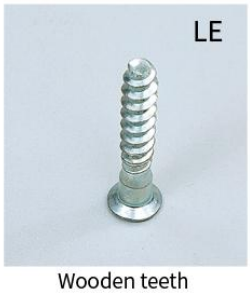

large buckle

Tip Screws

Black connecting rod

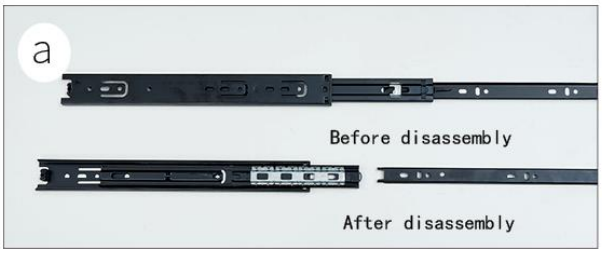

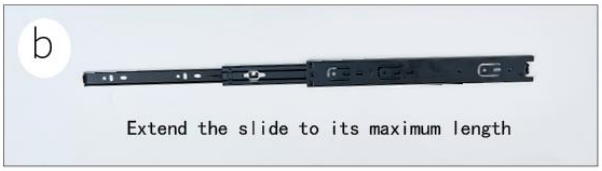

Wooden teeth

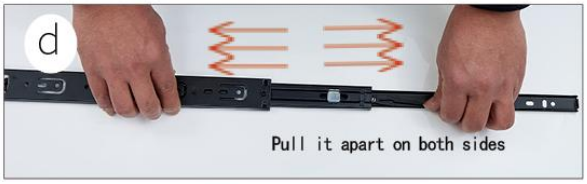

Rail

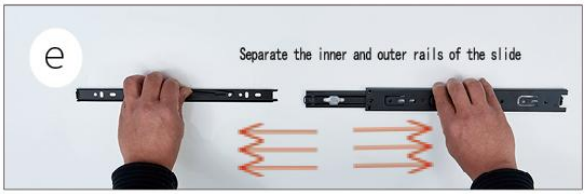

BEFORE INSTALLING THE PRODUCT, DISASSEMBLE THE SLIDE. SLIDE DISASSEMBLY STEPS

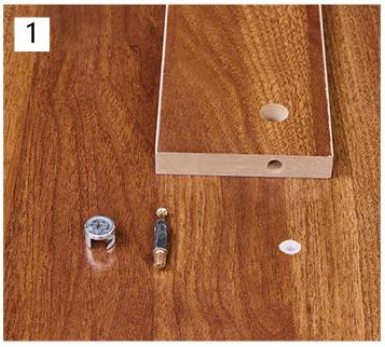

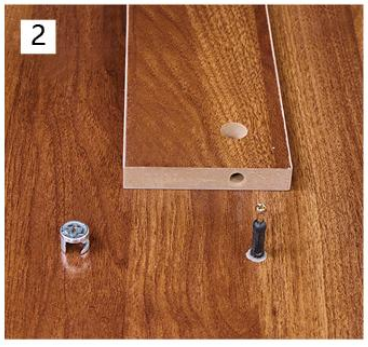

The method of removing the slide track is the same as that of removing the drawer. If there is a problem with the installation of the rearmost drawer, you can refer to this page to remove the drawer and reinstall it.

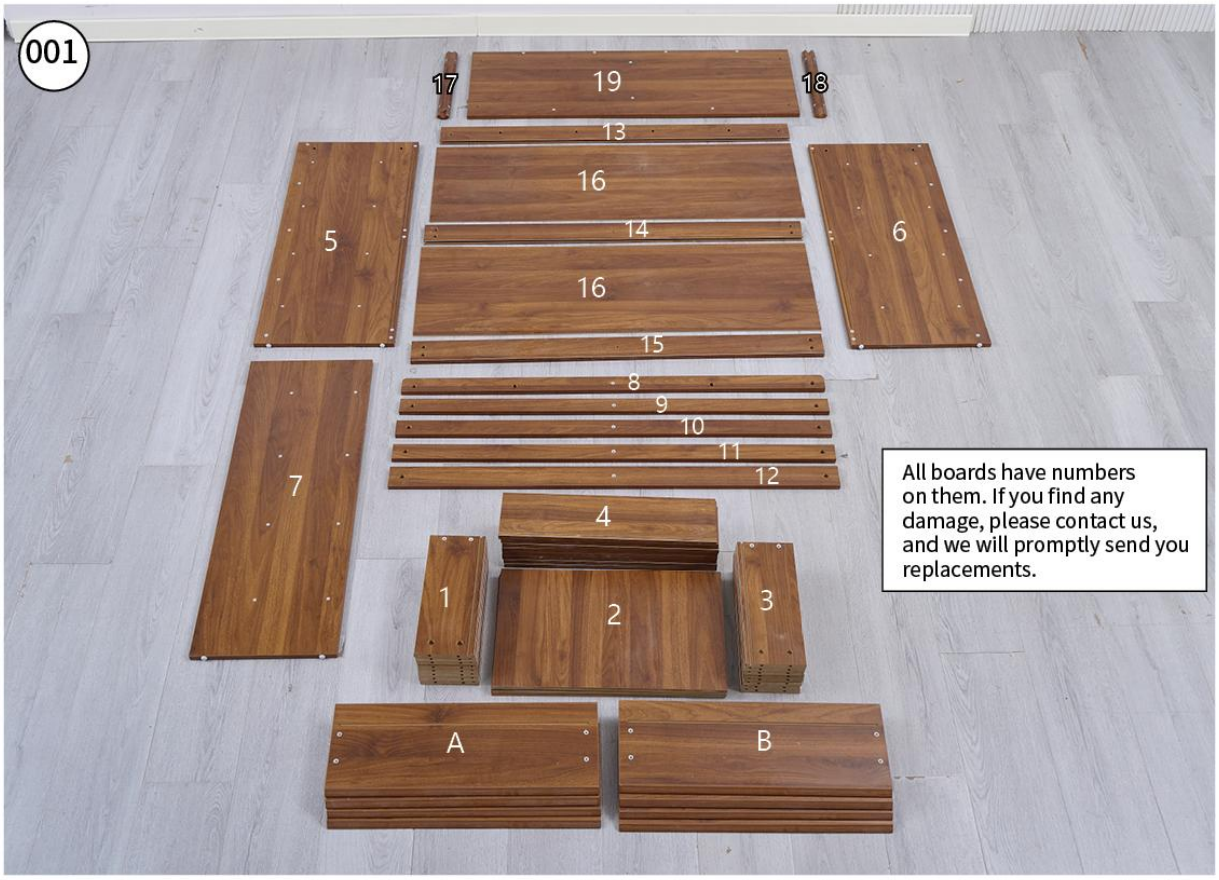

Connecting rods and circular cam locks are fittings used to connect wood panels. The method of use is shown in the diagram. Pay special attention to the direction of the arrow on the circular cam lock. When beginning to place it, ensure the arrow direction aligns with the hole direction on the side of the wood panel. After assembling the panels, tighten the circular cam lock clockwise.(If there is a gap between the panels during assembly, simply adjust the circular cam lock so that the arrow direction aligns with the hole direction on the side of the wood panel.)

If you want to remove it, you just need to rotate the LB counterclockwise in the direction of the opening on the side of the board, and then you can successfully remove it.

All boards have numbers on them. If you find any damage, please contact us, and we will promptly send you replacements.

002
First, install the drawers.

The installation steps for the drawers are identical; we will use one as an example.

NOTES ON INSTALLING THE DRAWER:

As shown in the figure, pull out the inner rail of the drawer, and also pull out the silver metal sheet inside.

The inner rail of the drawer should remain parallel to the outer rail of the drawer.Push it gently inward.

It doesn't matter if the installation is not successful at the first attempt. Press the black plastic parts on the inner rails on both sides, and you can easily take out the drawer (you can refer to Step C of the slide track disassembly on the second page of the installation diagram) and install it again until it is properly installed.
