

VIGO

Homes Shift Over Time

The floors and walls in your home shift slightly over the years, which can cause your fixtures to move out of alignment. Our frameless showers are designed with Flex-sizing and SmartAdjust to ensure they remain plumb and level during installation and any later modifications.

Flex-sizing Technology™

We engineer our frameless shower enclosure collection with 4" of built-in horizontal adjustability technology. This adaptability assures that your VIGO product is easily installed in your space and will continue to function properly for years to come.

SmartAdjust™ Technology

The wall mount brackets for the structural rail have 13 mm built-in adjustability.
