

Liberty Garden Model #710

This hose reel must be mounted to a solid masonry wall or to wall studs

TIP: Remember to use the correct size and quantity of hardware to properly support the total weight of the unit. A standard 100' length of garden hose weighs approximately 15 lbs. Filled with water the additional weight can exceed 20 lbs. The mounting hardware must be able to support the combined weight of the unit, garden hose, plus water.

INSTALLATION

This hose reel must be mounted to a solid masonry wall or to wall studs

1 MOUNTING ON BRICK MASONRY WALL

NOTE: The following hardware (not included) is recommended for installation.

- (4) 7 or 8 mm x 60 mm masonry wall anchors
(5/16" x 2 1/2")
- (4) Anchor sleeves
- (4) Washers
- (4) Lock washers
- (4) Nuts

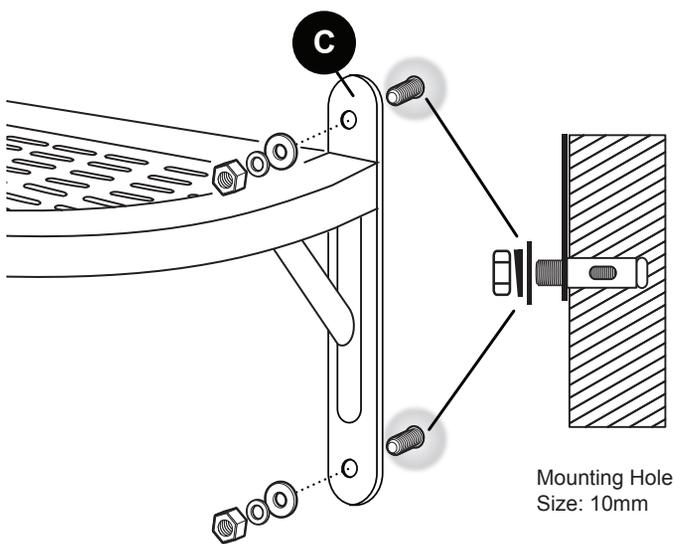

- Position and hold your Navigator base shelf (C) against the brick masonry wall at a convenient height. Mark the position of each suspension hole on the wall. Remove the base shelf (C).

- Using a power drill, drill holes 9/16" in diameter and 1 5/8" deep at the marked positions on the wall.

- Insert the masonry wall anchors into the anchor sleeve. Next, insert the anchor and sleeve into the drilled holes until the steel sleeve is completely in the wall.

- Place the base shelf (C) on the masonry wall anchors.

- Install a washer, lock washer, and nut over each wall anchor and tighten securely.

2 MOUNTING ON FLAT WOOD FRAME WALL

NOTE: The following hardware (not included) is recommended for installation.

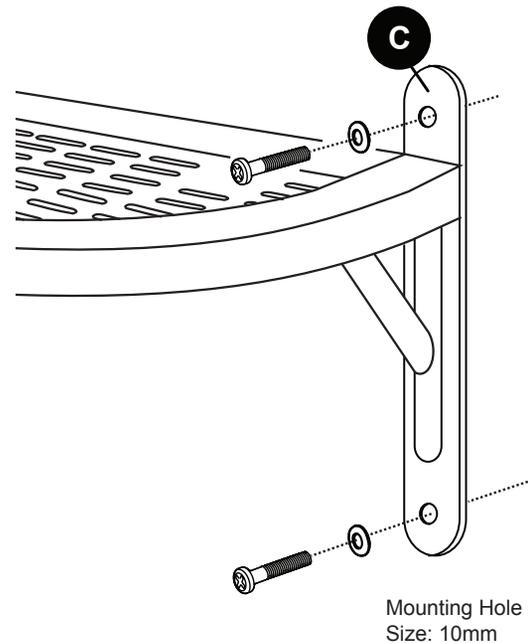

- (4) 7 or 8 mm lag screws with washers
(5/16" x 2 1/2")

- Position and hold your Navigator hose reel base shelf (C) against the wood wall at a convenient height. Mark the position of each suspension hole on the wall. Remove the base shelf (C).

- Using a power drill, drill pilot holes 1/4" in diameter and 2 1/2" deep at the marked positions on the wall.

- Align the hose reel suspension holes with the pilot holes.

- Attach the base shelf (C) to the wall using the lag screws with washers and tighten securely.

TIP: Remember to use the correct size and quantity of hardware to properly support the total weight of the unit. A standard 100' length of garden hose weighs approximately 15 lbs. Filled with water the additional weight can exceed 20 lbs. The mounting hardware must be able to support the combined weight of the unit, garden hose, plus water.
