HOW TO RELEASE A LOCKING FILE DRAWER THAT WON'T OPEN

IMPORTANT: THE KEYS ARE LOCATED ON THE FILE ROD.

The T-Lock affects both the drawer that it's attached to and the drawer directly above it.

To release a stuck file drawer that won't open, first unlock the file drawer below it with the key.

Next, open the lower file drawer.

Using the file key, push up against the T-Lock and gently pull the top drawer until it opens.

NOTE: The T-Lock is located in the center of the wood crossbar.
