

Gemini LED Floor Lamp

Assembly Instructions for the Brightech Gemini LED Floor Lamp :

- 1 - Connect bottom pole (B) to base (A) and pole (B) to middle pole (C).
- 2 - For gripping ease during assembly, first connect dual head pole (E) to middle pole (D), then connect assembled piece (D and E) to pole (C).
- 3 - While connecting pole pieces, gently pull excess cord out from bottom of pole (B) and make sure it does not get caught in the threading.
- 4 - Plug power adapter (F) to lamp first, then to outlet.

Operation and Features:

The Gemini is controlled via a three step touch sensor button located at the top of the pole. Simply tap the button to turn on and cycle through the dimmer settings. It can be turned on and off via a wall switch for convenience, but it cannot be dimmed except by the touch sensor on the lamp. When using the lamp with a wall switch, it will remember its settings: if you turn the switch off with the lamp set to a lower brightness level, it will stay on the same lower level when you turn the switch back on.

Extend Your Warranty, Free :

If you would like to extend your warranty from 3 years to 5, free, fill in this short product registration form on our site :
