Password Setting:

1. The password must be set in the unlocked state(**the original password is 0-0-0**);
2. The position of the password reset is the small hole under the bevel of the outer ring , rotate the head until you can see the button inside;

3. Use a small rod-shaped cylinder to push the button and then press and turn the cipher wheel to set the center position of the number you want;
4. Release the button to complete the password setting.

Lock & Unlock:

1. Rotate to lock;
2. After locking ,scramble one or all of the combination wheels to lock;
3. When unlocking,dial to the set password to unlock.
