

UNISAKEY READING PILLOW

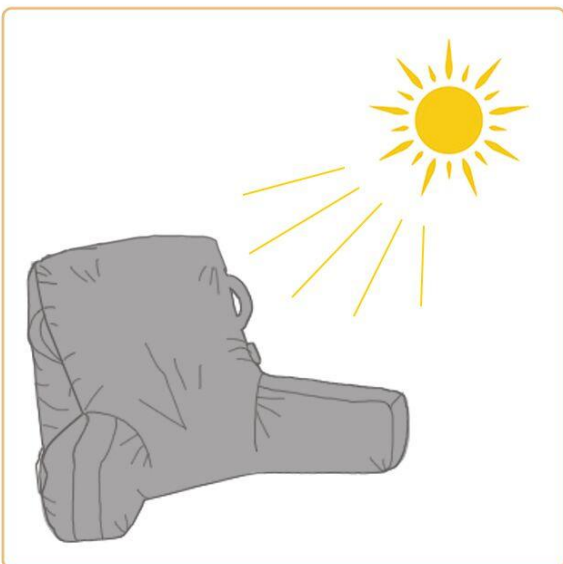

FLUFFING INSTRUCTIONS

Because it arrives at the bag in a **compressed state**, the fabric is wrinkled when you just open the bag, without the fluffiness of the mat, and in poor condition. Our filler polyester fiber has the advantages of **high strength, good elasticity** and **abrasion**. However, polyester fiber may lose some of its fluffiness after compression.

Here are **5** ways to bring back the fluffiness after compression:

1. PATTING OR SHAKING

Physically patting or shaking several times can help loosen the fibers and restore their original form.

2. SUNBATHING

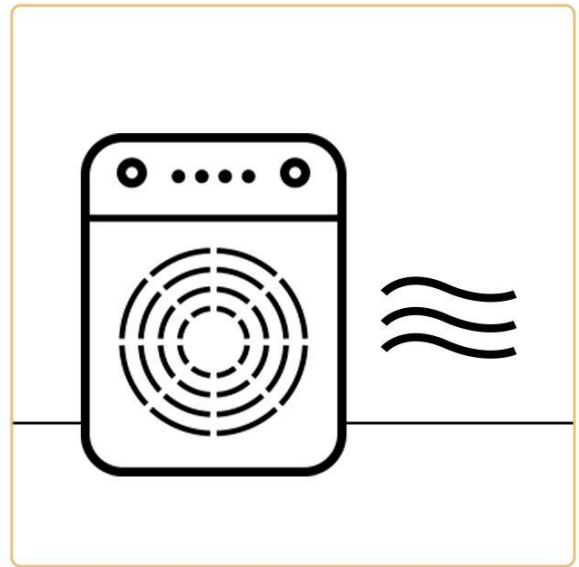

Place it in the sun for a few hours. The warmth of the sunlight will help the fibers expand naturally, restoring their fluffiness.

3. DRYING

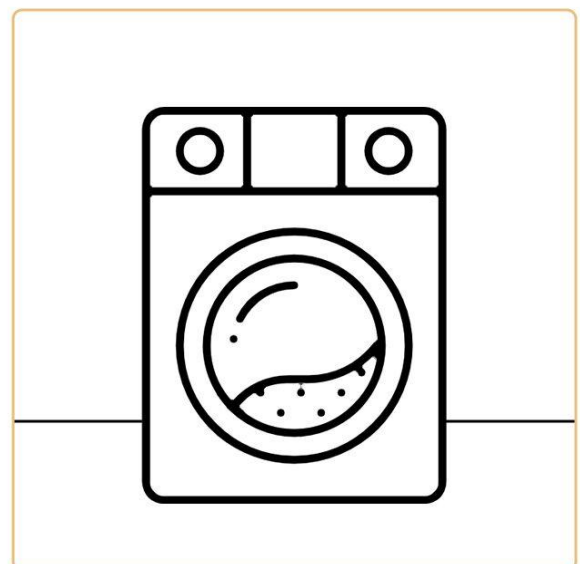

Low temperature drying can make our filler polyester fibers expand with heat and restore elasticity.

Note: Avoid high temperature drying.

4. STEAM TREATMENT

Steam softens the fibers, causing them to expand and restore fluffiness.

5. WASH THE COVER

The outer cover of the reading pillow is removable, if the surface is marked due to compression, the jacket can be washed in the washing machine.

If you encounter any problems when opening or using the reading pillow, please don't hesitate to **contact us**, we will be responsible to the end!

We apologize for any inconvenience caused and thank you for your understanding and support!
