Cleaning and Maintenance

- Before using, clean the cooler with a soft dry towel.
- Drain the water in the cooler and dry the cooler with a soft towel.
- We recommend the use of furniture covers (not included) to protect your cooler while not in use.

Product Components Maintenance: FOR IRON COMPONENTS

- Our iron components for garden accessories and furniture are finished using a powder coating process that protects it from rusting. However, due to the nature of iron, surface oxidation (rusting) will occur if these protective coatings are scratched. This is a natural process and is not a defect. To minimize this condition, use care when assembling & handling the product to prevent scratching the paint. Should any scratching or damage occur, immediately touch-up with rust inhibiting paint, which is readily available at a local hardware store. Surface rust can also be easily removed with a very light application of cooking oil. If rusting occurs and if no measure is taken to inhibit this, the rust may start dripping onto a deck or patio and cause damaging stains that may be difficult to remove. This can be prevented if measures are taken to keep the product from rusting.
- To prolong the life of your cooler, it is recommended that you drain out all liquid and thoroughly dry your cooler after every use. Not complying with this care requirement can cause premature rusting and water deposits (metal interior) or molds and mildew (for plastic interior).
