3. Move the switches to the desired level of soap quantity.
4. Push the rubber plug back into the access hole.

Warnings:

- Do not install the soap dispenser facing a mirror or other electronic systems operated by an infra-red sensor
- To prevent reflection problems, it is recommended to keep a min. distance of 5' (1.5 meters) between the soap dispenser and other objects
- The user hands should not interfere with the soap dispenser sensor detection area while operating a nearby faucet or other objects

Troubleshooting

The soap can crystallize when it remains in the dispenser and, even more so, in the hoses, for a long time without flowing. If that happens, hoses need to be rinsed with warm water to clear them of the crystallized soap. Soap residues on stainless steel and other metal finishes should be removed immediately. When not removed properly (cleaning), soaps containing tensides can lead to corrosion of those metals.

Check Pump:

A. Check electric supply and connections

Check that the AC outlet is live and that the adaptor is completely plugged in. Confirm batteries have life and check that all electric connections are completely connected and seated (4).

B. Check pump

Press the prime button on the pump housing. The motor should run while the button is being pressed. It might take up to 60 seconds for the priming process to remove all air from the system. Air bubbles will stop the soap from flowing if they are present in the soap line.

Symptoms:

Pump runs but no soap is coming from the spout.

- Confirm soap in bottle
- Visually inspect the tip of the spout for blockage (1). Debris or hardened soap may be blocking the line.
- Use warm water to clear the soap line

System works with Prime button but not auto.

- Check infrared sensor (2) for obstructions (dirt, scratches, object, ect).

System must be primed often / soap is backflowing

- Check soap line connections (3). Inspect these unions while priming the system. This area should be dry with no soap/bubbles or air leaking.
- Make sure the BACKFLOW Prevention valve (5) is installed in the end of the soap line inside the bottle.

If issues still persist after troubleshooting. Please contact LACAVA technical support.

Cleaning and Care

IMPORTANT NOTES!

1. Please keep the soap bottle free of any dirt and debris - it may block the access point and soap lines. If any impurities found in the soap, please replace it.
2. Remove liquid soap from the bottle if device not in use for longer periods of time, as soap dries up, solidifies, and clogs the lines and spout. Rinse all lines with warm water.
3. Refill the bottle when only 1/2" of soap left in the bottle.
4. Timely replace the batteries when they are dead.
5. To clean the soap dispenser:
 - unplug and remove the batteries, empty the soap bottle and use damp cloth to wipe and then dry the fixture with towel.
 - never immerse the pump battery box in water, it might damage the circuit board
 - wipe the battery box only with dry cloth
 - never use highly corrosive chemical solvent cleaning products that may damage the finish
