

Assembly Instructions for **Model 1722141**

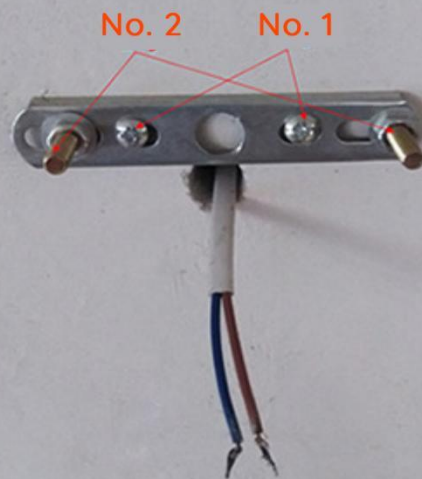

Installation method:

Refer to the installation method of similar light fixtures; the installation method is the same.

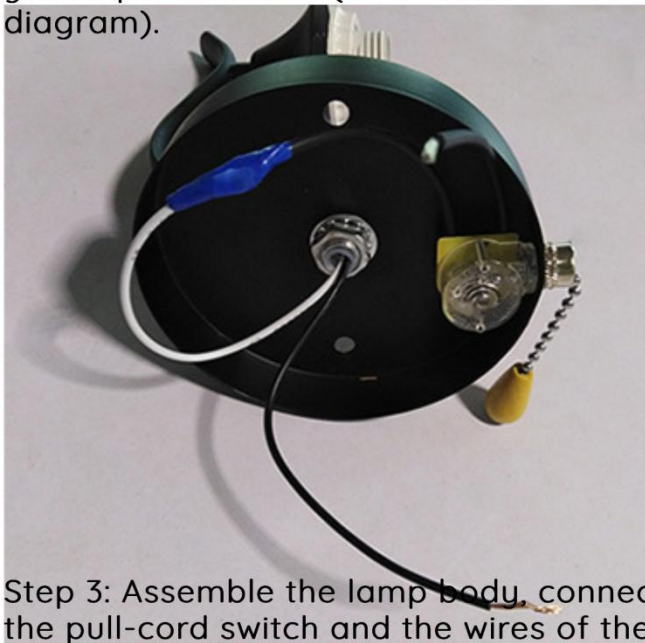

Installation Example/Wiring Instructions

Step 1: First, disconnect the power supply. Use the mounting plate to mark the drilling positions. Use a power drill to drill holes in the wall and insert the yellow plastic tubes (as shown in the diagram).

Step 2: Refer to the hole spacing on the base to determine the position of screw No. 2, and tighten nut No. 2 until the screw cannot rotate. Then tighten the two screws No. 1 (as shown in the diagram above).

Step 3: Assemble the lamp body, connect the pull-cord switch and the wires of the lamp arm. Connect one end of the switch to the white wire of the lamp arm and wrap it with electrical tape. For double-headed lamps, twist the white wires of the lamp arms together (as shown in the diagram).

Step 4: Connect the other end of the switch to the live wire on the wall, and connect the black wire of the lamp arm to the neutral wire on the wall. Then fix the lamp with round-head screws. Unscrew the No. 3 lampshade fixing ring and set it aside.

Finally, use the No. 3 lampshade fixing ring to fix the lampshade, screw in the light bulb, and the installation is complete.

Your fixture is now assembled and ready to use.
