

OUR NEW PRODUCT: THE MAWA BIO HANGER

Clothes hangers made from plant fibres and biopolymers

Our BIO clothes hanger, C-Cycle, is made from a material comprising natural fibres and plant processing residues.

It is individually shaped from granules using the injection moulding process and is available in various colours. MAWA C-Cycle stands out for its natural look and feel, as well as its high quality and stability. With its biogenic basis, it offers significant identification potential.

MAWA C-Cycle utilises organic residues, preserving the plant-based CO₂ storage for climate protection. Through recycling after use, it can extend its protective storage effect within the cycle.

MAWA C-Cycle carries the DIN Tested mark for products made from over 85% biogenic materials (registration number 8C365). By choosing MAWA C-Cycle, you are opting for the future of sustainable clothes hangers.
