

Installation Guide

I. Preparation Work

1. Confirm that all accessories are complete, including adjustable foot pads, yellow self-tapping screws, the base, the tabletop, and other components. The accessory kit is placed inside the drawer.

Pedestal

2. Prepare the tools needed for installation, such as a screwdriver.

II. Installation of Adjustable Foot Pads

1. Take out one adjustable foot pad. Align the threaded part of the adjustable foot pad with the pre-drilled installation hole on the base.

2. Follow the same method to install the remaining adjustable foot pads into the corresponding installation holes on the base.

3. After the installation is completed, adjust the height of the foot pads by rotating them according to the actual floor condition to keep the base level and stable.

III. Connecting the Base and the Tabletop

1. Take out the yellow self-tapping screws and align them with the connection part between the tabletop and the base (there are no pre-drilled holes on the tabletop, just align with the connection part directly).

2. Rotate the self-tapping screws clockwise and screw them into the tabletop and the base to firmly connect the two parts.

3. Follow the same method to complete the connection between the other base and the tabletop.
