Troubleshooting Guide

If you have difficulty operating your new ceiling fan, it may be the result of incorrect assembly, installation or wiring. In some cases, these installation errors may be mistaken for defects. If you experience any faults, please check this Troubleshooting Guide. If a problem cannot be remedied or you are experiencing difficulty in installation, please call our Customer Service Department (1-800-482-9235).

PROBLEM	SUGGESTED REMEDY
1. If fan does not start:	1. Check main and branch circuit fuses or circuit breakers. 2. Check line wire connections to fan and switch wire connections in switch housing. 3. Make sure main power is turned off. 4. Make sure that the wall control is turned "ON".
2. If fan sounds noisy:	1. Some fan motors are sensitive to signals from Solid State variable speed controls. DO NOT USE a Solid State variable speed control. 2. Allow "break-in" period of 24 hours. Most noises associated with a new fan will disappear after this period.
3. If light does not work:	1. Check black wire from fan to make sure it is connected to black (hot) wire from house. 2. Re-pair the remote control and receiver by holding the "OFF" button on the remote control according to the manual. **CAUTION: MAKE SURE MAIN POWER IS TURNED OFF BEFORE ACCESSING SWITCH HOUSING.**
4. If fan and light kit do not work:	1. Replace the batteries in remote control. 2. Re-pair the remote control and receiver by holding the "OFF" button on the remote control according to the manual.
