

PLACING YOUR SHADE COVER ON YOUR UMBRELLA FRAME

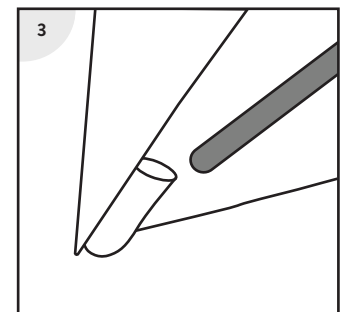

1. Remove the Finial cap from the top of the frame, to reveal the threaded coupling at the top of the umbrella.

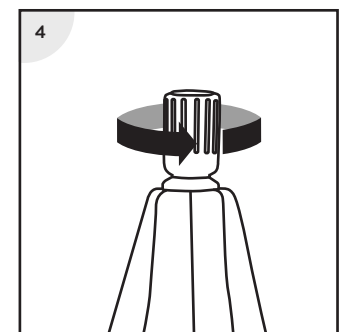

2. Open your fabric canopy and drape it over the frame such that the rib pockets at the corners are facing inwards towards the frame.

3. Line up the center hole of the fabric canopy with the threaded coupling for the finial cap, and slide the hole into position. One by one slide the rib pockets over the umbrella ribs so that the pockets are filled by the rib ends.

4. Reattach the finial cap.
The Frame and cover are now ready to be placed with your bottom pole into position, for use.

PLACING YOUR SHADE COVER ON YOUR UMBRELLA FRAME

In Normal times, our teams would have placed the cover fabric onto the frame for you, saving you these extra few minutes between opening your new umbrella box, and enjoying the shade. During this time, we have made this small change to how we ship the item to you, so we can work to achieve 3 goals.

1. To reduce the exposure you have to our team members handling your product. Not placing the cover on the item keeps all the components wrapped in their packaging and limits most of the person to person handling of the item before you touch it.
2. It helps us to ensure that our fulfillment teams maintain safe working distance within our facility, not interacting closely.
3. Speed up our delivery time. The limits we have in place to continue working for our customers, made our work slower, and you are helping us serve more of our customers a little bit faster, so we're very grateful for your help and understanding.
