Warning:

This product is for children.

Supervision is required at all times.

Warning:

Manufacturer is not responsible for modifications made to our products by customers.

Cleaning:

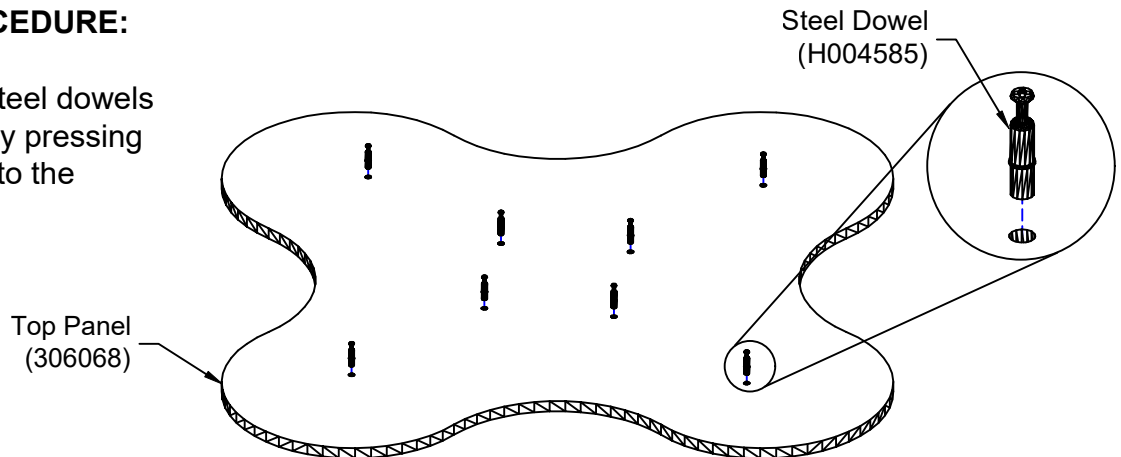

Use a mild soap and water solution. Be sure to wipe all water from the wood surface.

Important:

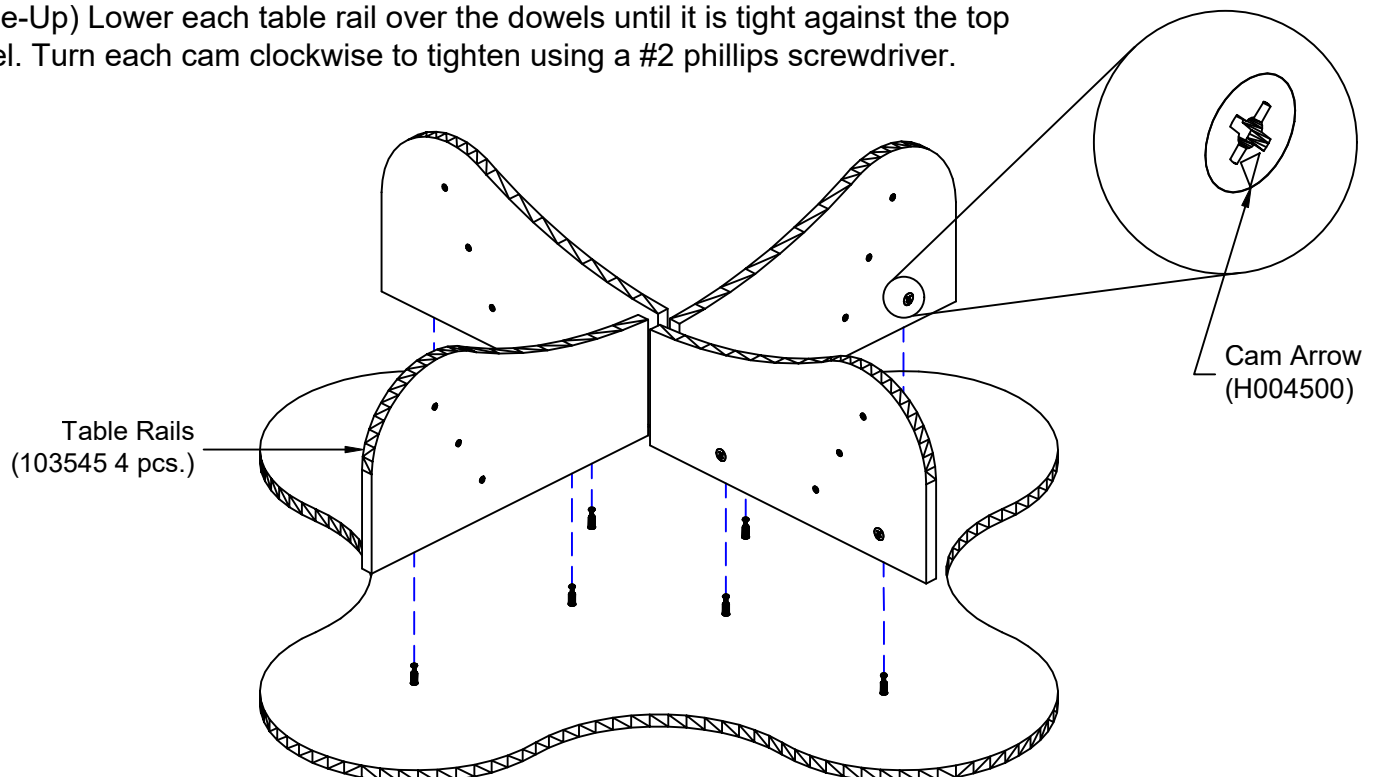

Do not discard these instructions. Keep for future reference.

ASSEMBLY PROCEDURE:

Step 1: Insert the steel dowels into the top panel by pressing them completely into the predrilled holes.

Step 2: Insert two metal cams into the predrilled holes in each table rail. Make sure that the arrows on the cams are pointing to the drilled edge. (See Close-Up) Lower each table rail over the dowels until it is tight against the top panel. Turn each cam clockwise to tighten using a #2 phillips screwdriver.

Product Guide - General Instructions and Information

Step 3: Align the slots of the upper and lower base rails, and lower them between the table rails until they are resting on the top panel. Secure both base rails with the bolts and washers as shown below. The default table height will be approximately 14" from the floor with the base rails in this position.

ADJUSTING TABLE HEIGHT:

To change the table height, place the table upside-down on the floor. Remove the machine bolts and washers holding the base rails in place. First, raise the lower rail until it is at the desired height and reinsert the bolts. Now repeat this step for the upper rail. Use the drawing at right to determine which hole to use for each height. Make sure to tighten each bolt completely, and remember to check the bolts periodically for tightness.
