Use and Care Instructions for your Planter

We recommend cleaning the planter before using it. New planters may often have residue from production.

Any time you are putting new soil into a planter, it is best to clean the planter first.

Items you need:

Fiberclay, MgO, or Resin – water, mild soap, or bleach (optional) and a soft brush

What you need to do:

1. Empty your planter of any dirt and dead plant material
2. Rinse the planter with a hose to remove dirt sticking to the sides
3. Clean and Scrub!

When cleaning the planter, use a mixture of water and mild household dish soap. Use a soft brush to clean the insides. Let the planter dry before planting anything in it.

By cleaning your planter regularly, you will not extend the life of the planter, but also allow for healthy plants to grow. You will enjoy the results for many seasons to come.
